

Major LLMs and Their Best-Known Skillsets

ChatGPT (OpenAI — GPT-4o, o3)

ChatGPT is the most widely used general-purpose conversational AI. It excels at **creative writing**, brainstorming, and content generation, as well as code generation and debugging. With integrated DALL-E image generation and vision capabilities, it handles multimodal tasks effectively. Its plugin and tool-use ecosystem makes it highly extensible.

Best for: Versatility and broad everyday use.

Claude (Anthropic — Claude 4, Sonnet)

Claude is known for its **long-context understanding** (up to 200K tokens), nuanced reasoning, and careful analysis. It excels at document summarization, research synthesis, and following complex multi-step instructions. Claude is regarded as safety-conscious and less prone to hallucination than many competitors.

Best for: Long documents, thoughtful analysis, and coding.

Gemini (Google — Gemini 2.5 Pro/Flash)

Gemini was built as a **multimodal model from the ground up**, handling text, image, video, audio, and code natively. It offers a very large context window (1M+ tokens) and deep integration with the Google ecosystem (Search, Workspace, YouTube). It is particularly strong at math, science, and factual reasoning.

Best for: Multimodal tasks, research, and Google-integrated workflows.

Manus (Manus AI)

Manus is an **autonomous task-execution agent** — rather than just chatting, it actually performs work end-to-end. It orchestrates multi-step workflows including research, website building, report writing, file management, and code deployment. It runs multiple tools and subtasks in parallel to deliver complete projects.

Best for: Complex projects that require action, not just answers.

Grok (xAI)

Grok offers **real-time access to X/Twitter data** and is known for its direct, less-filtered personality. It provides strong awareness of current events and trending topics, making it uniquely suited for social media analysis.

Best for: Social media analysis, unfiltered commentary, and real-time information.

LLaMA / Meta AI (Meta — LLaMA 4)

Meta's LLaMA models are **open-source and self-hostable**, making them ideal for developers who want local or private AI deployments. They offer strong multilingual capabilities and are widely used as a foundation for fine-tuning custom models.

Best for: Developers who want local/private AI or custom models.

Mistral (Mistral AI)

Mistral is known for delivering **efficient performance at smaller model sizes**, making it cost-effective for enterprise deployments. It offers strong European language support and open-weight models suitable for on-premise use.

Best for: Cost-efficient enterprise deployments and multilingual European use cases.

Copilot (Microsoft — powered by OpenAI)

Microsoft Copilot provides **deep integration with Microsoft 365** (Word, Excel, Teams, Outlook) and GitHub. It excels at code completion in VS Code and enterprise productivity workflows within the Microsoft ecosystem.

Best for: Microsoft ecosystem users and developers.

Perplexity AI

Perplexity is a **search-first AI** that provides answers grounded in current web sources with real-time citations. It emphasizes transparent sourcing, showing exactly where information comes from.

Best for: Research questions where you need verified, cited answers.

DeepSeek (DeepSeek AI)

DeepSeek has gained recognition for its **strong reasoning and math capabilities** at competitive pricing. It offers open-source models and performs well on technical and scientific benchmarks.

Best for: Technical/scientific reasoning and cost-conscious users.

Cohere (Command R+)

Cohere specializes in **enterprise retrieval-augmented generation (RAG)**, multilingual search, and summarization. Its models are designed to provide grounded responses with citations, making them ideal for business knowledge management.

Best for: Enterprise search, knowledge bases, and business documents.

Summary Comparison

LLM	Developer	Primary Strength	Best Use Case
ChatGPT	OpenAI	General-purpose versatility	Everyday tasks, writing, coding
Claude	Anthropic	Long-context reasoning	Document analysis, research
Gemini	Google	Native multimodal	Video/image/audio + text tasks
Manus	Manus AI	Autonomous task execution	End-to-end project delivery
Grok	xAI	Real-time social data	Social media, current events
LLaMA	Meta	Open-source, self-hostable	Custom/private deployments
Mistral	Mistral AI	Efficient small models	Cost-effective enterprise AI
Copilot	Microsoft	Microsoft 365 integration	Office productivity, coding
Perplexity	Perplexity AI	Cited search answers	Fact-checked research
DeepSeek	DeepSeek AI	Math and reasoning	Technical/scientific work
Cohere	Cohere	Enterprise RAG	Business knowledge management
