

Brandon Rose — Case Notes, IP Strategy & Career Documentation

Draft — for personal reference and attorney review. This document compiles Brandon Rose's stated facts, identified evidence locations, and selected public/legal-context sources as of **July 28, 2026**. It is a working record, not a legal opinion or a finding of fact. Statements attributed to Brandon, coworkers, or other identified individuals have not been independently verified unless expressly supported by a cited public source. In particular, an arrest or charge is not proof of a conviction, and cited statutes require fact-specific legal analysis by qualified counsel.

Purpose, Scope, and Evidentiary Status

This document is intended to preserve a structured account of workplace circumstances, personal-project boundaries, recordings, product-development work, and a prospective automation-consulting business. It also identifies potential evidence and questions for legal consultation. It is **not** intended to establish wrongdoing, criminal liability, consent, invention ownership, or admissibility of evidence.

Category	How this document treats it	Examples
Brandon's account	A factual account supplied by Brandon that should be corroborated with records, witnesses, or contemporaneous communications where possible.	Work arrangements, conversations, promises, product-development history, and asserted workplace conduct.
Potential evidence	A record type or location that may support, contextualize, or contradict an account. Preservation of originals and metadata is important.	Drive files, Git commits, Manus history, geofence data, ConnectUC/UConnect recordings, and witness recollections.
Public reporting	A third-party news report describing arrests, charges, or other reported events; it is not a court disposition unless an adjudicatory source is cited.	The January 2018 St. George News and KUTV reports discussed in Section 4. 4
Legal context	Statutory background that may be relevant but does not decide a fact-specific matter by itself.	California Labor Code § 2870, Business and Professions Code § 16600, and Penal Code § 632. 1 3

1. Intellectual Property Rights Analysis

Key Facts and Separation of Personal Work

Brandon Rose works at **ApartmentCorp** under the title **Special Projects**. Marc Menowitz pays for ApartmentCorp's company Manus subscription. Brandon separately maintains his own personal Manus subscription associated with **BrandonRose2@gmail.com** and a personal GitHub account, **BrandonRose2**. Brandon states that he works from home on his personal laptop after business hours for personal projects and does not charge ApartmentCorp overtime for that work.

Claimed boundary	Brandon's stated facts	Potential corroboration
Time	Personal-project work occurs after business hours, at home, and without overtime charged to ApartmentCorp.	Calendar history, time records, location history, screenshots, and contemporaneous notes.
Equipment	Personal projects are developed using Brandon's personal laptop.	Device records, purchase records, local account history, and repository configuration.
Accounts	Separate personal Manus and GitHub accounts are used for personal work.	Manus task history, account records, GitHub audit trail, commit metadata, and repository settings.
Business scope	The proposed side business focuses on automation consulting for non-property-management industries.	Product scopes, client lists, marketing materials, feature documentation, and engagement records.

California Labor Code Section 2870 Context

California Labor Code § 2870 provides that an employee-invention assignment provision generally does not apply to an invention developed entirely on the employee's own time without employer equipment, supplies, facilities, or trade-secret information. However, the statute expressly preserves exceptions for inventions that relate, at the time of conception or reduction to practice, to the employer's business or actual/demonstrably anticipated research or development, or that result from work performed by the employee for the employer. It also states that a contrary assignment requirement is unenforceable to the extent it reaches an otherwise excluded invention. [1](#)

Brandon's stated position is that his personal projects align with the statutory boundary because they are developed on personal time, at home, on a personal laptop, through personal Manus and GitHub accounts, and are aimed at automation consulting for industries outside property management. This is a **fact-specific legal theory**, rather than a conclusive ownership determination. A qualified attorney should review the actual employment agreement, confidentiality terms, any invention-assignment clause, the timing of development, the technical overlap of each project, and any company-resource use before Brandon relies on that position.

Marc's Systems as Potential Separation Evidence

Brandon states that Marc geofences him and records workplace communications through ConnectUC/UConnect. Brandon's view is that these systems may provide contemporaneous evidence distinguishing personal work performed at home from ApartmentCorp business discussed in recorded work communications. The relevant evidence would include authenticated system exports, retention policies, timestamps, access logs, and documentation showing which account or device was used for each activity.

System or record	Brandon's stated significance	Preservation point
Geofence/location records	May show Brandon was at home when working on personal projects.	Preserve original timestamps, source-system exports, and any available location-accuracy metadata.
ConnectUC/UConnect recordings	May show workplace conversations concerned ApartmentCorp matters rather than personal projects.	Preserve unedited recordings, associated notices/consents, participant details, timestamps, and transcripts.
Separate Manus accounts	May distinguish company-account work from personal-account work.	Export task history, timestamps, subscription/account ownership documentation, and relevant project records.
Separate GitHub repositories	May show dated development history for personal work.	Preserve commits, branch history, pull requests, releases, repository settings, and local Git logs.

California Non-Compete Context

California Business and Professions Code § 16600 broadly provides that, except as provided in the chapter, contracts restraining a person from engaging in a lawful profession, trade, or business are void to that extent. The statute expressly directs a broad reading in employment contexts for noncompete agreements or clauses that do not satisfy a statutory exception. [2](#) Brandon's position is that he may pursue a lawful post-employment competing product; however, that statutory context does **not** itself excuse misuse of trade secrets, violation of

confidentiality commitments, infringement, or other independently enforceable duties. Contract-specific advice is required before acting on any employment restriction.

2. Recording and Documentation Legal Position

Brandon's Recording Device and Workflow

Brandon states that he has a **Disoidoe 136GB magnetic voice recorder**, described as an AI recording device, which he keeps with him at the office. He states that he uses Manus and Claude to transcribe, summarize, and organize recordings into Google Drive, including voice profiles for coworkers. Brandon also identifies a folder titled **"Marc's Inappropriate Outbursts"** that is said to contain recordings of Marc screaming at employees.

One example supplied by Brandon is a recording in which Marc allegedly screamed "Ethan!" aggressively at a coworker because Ethan was not in Marc's line of sight. Brandon states that recordings are transcribed, summarized, and organized with timestamps. The original device files, unmodified source recordings, transcript versions, processing logs, and cloud-account metadata are particularly important for preserving context and authenticity.

Awareness and Consent Facts Reported by Brandon

Reported event	Brandon's account	Potential supporting record
Expense discussion	Brandon asked Marc whether the company would expense an AI recording device; Marc said no.	Email, chat, calendar, participant testimony, or contemporaneous note.
Personal purchase discussion	Brandon told Marc he would "most likely get one on my own."	Email, chat, meeting note, or witness testimony.
Meeting-use discussion	Brandon told Marc that the device would be "very useful for our sit-down meetings in the conference room."	Email, chat, meeting note, or witness testimony.
Response	Marc did not object or tell Brandon not to record.	Witness testimony, written communications, or the absence of a contrary message in relevant records.
Workplace recording practice	Marc reportedly wears a Plaud recorder around his neck at all times.	Photos, witness testimony, device records, policy notices, and recordings.
Coworker awareness	Two coworkers reportedly know Brandon has the recorder.	Identified witness statements.
Company recording system	Brandon signed a consent form for Marc's ConnectUC/UConnect recording system.	Signed consent form, policy, notice, and account records.

California Two-Party-Consent Context

California Penal Code § 632 generally prohibits intentional recording of a **confidential communication** without consent of all parties. The statute defines a confidential communication by reference to circumstances reasonably indicating that a participant desires the communication to be confined to the participants, while recognizing some exclusions. It also includes rules that can affect admissibility. [3](#)

Brandon's stated legal theory is that Marc's awareness of the planned device, lack of objection, Marc's own alleged continuous use of a Plaud recorder, coworkers' awareness, and existing

consent to the company's recording system may support an argument that there was consent, implied consent, or a reduced expectation of privacy in particular workplace communications. These facts may be relevant, but they do **not** automatically resolve whether a particular communication was confidential, whether all parties consented, whether a notice was sufficient, or whether a recording would be admissible. Each recording should be evaluated individually with counsel before it is disclosed, relied upon in a dispute, or used outside its original context.

Brandon identifies one factual gap: he did not expressly confirm to Marc that he had purchased the device. Brandon's view is that a simple future mention could clarify awareness, although the legality and advisability of any future recording practice should be discussed with an attorney before making or using additional recordings.

3. Workplace Environment Documentation

Pre-Hire Warning and Turnover

Brandon states that, during his second interview, Operations Manager Nicole and Robert told him: "We just wanted to make sure you have thick skin," and that "Marc can be... difficult, inappropriate." Brandon further states that they told him seven people had tried the position before him during the preceding eight months and had quit. Brandon identifies Nicole and Robert as potential witnesses to that conversation and its context.

The account, if accurately corroborated, may be relevant to whether individuals within the organization had prior notice of alleged behavior before Brandon's employment began. Relevant corroboration could include interview communications, calendar invitations, notes, recruiting records, HR files, turnover data, and witness statements.

Blocked Promotion

Brandon states that he was hired as **Executive Personal Assistant**. He further states that, within 60 days, Nicole privately told him she wanted him to succeed her as Operations Manager upon her retirement in November and described him as "the most suited and qualified" for that role. Brandon states that Marc blocked the possibility because he had "already promised the role to Robert."

Topic	Brandon's account	Potential corroboration
Original role	Brandon was hired as Executive Personal Assistant.	Offer letter, job description, payroll records, onboarding materials, and organizational chart.
Succession discussion	Nicole stated that Brandon was the most suited and qualified person to succeed her.	Nicole's statement, contemporaneous notes, emails, texts, or meeting records.
Decision attributed to Marc	Marc said he had already promised the Operations Manager role to Robert.	Emails, chat records, witnesses, org-chart changes, job-posting history, and personnel records.
Result	Robert Sagarang was given the Operations Manager role over Brandon.	Appointment announcement, organizational chart, payroll/title records, and witness statements.

Broken Promises, Workplace Conduct, and Surveillance

Brandon states that Marc made promises about pay increases that were never fulfilled, represented that company vehicles did not exist, and made inaccurate statements about other employees' salaries. Brandon also reports that multiple coworkers warned him about Marc's behavior and treatment of people. These are Brandon's accounts and should be tied to specific dates, communications, witnesses, payroll records, vehicle records, and other contemporaneous evidence before being presented as substantiated facts.

Brandon further states that Marc geofences him, records communications through ConnectUC/UConnect, and obtained Brandon's signed consent for the company recording system. For evidentiary purposes, the scope of the consent, notice wording, data-retention practices, and access controls should be preserved.

Brandon reports that Marc has been involved in multiple lawsuits, including sexual-harassment lawsuits, and has lost them. No court docket, case caption, decision, or other primary source is included in this document to verify those statements. Any legal consultation, demand, agency charge, or public statement should separately identify and confirm the relevant cases before relying on this assertion.

4. Robert Sagarang — Public-Record and Background Notes

Important Accuracy Qualification

The two cited January 2018 news reports describe **arrests, charges, and allegations**, not a criminal conviction, sentence, or final court disposition. This document therefore preserves Brandon's statements about conviction and prison time as **unverified accounts** rather than established public-record facts. Before using the term "convicted felon," relying on an asserted five-year prison term, or making a public statement about criminal history, obtain and review appropriate court records or seek legal counsel.

Public Reporting from January 2018

The St. George News article, published January 19, 2018, reported that law enforcement identified Robert Sagarang, described as 39 and from Sherman Oaks, California, along with Diva Arias and Sarah Paloyo, as suspects in an alleged identity-fraud ring. It reported an alleged unauthorized credit-card transaction for a vacation rental, searches of rental properties and a vehicle, and the seizure of personal information, allegedly fraudulent driver's licenses, credit cards, financial documents, checks, Social Security cards, equipment used to manufacture fraudulent documents, phones, and other property. It further reported that the three suspects were arrested and initially booked on fraud- and drug-related charges under alleged victims' names. The article expressly stated that persons arrested or charged are presumed innocent unless guilt is determined by a court or other trier of fact. [4](#)

KUTV's January 19, 2018 report likewise stated that three California residents were arrested in an investigation involving alleged fraud and identity theft linked to vacation-property rentals. It named Robert Sagarang, described him as 39 and from Sylmar, California, and stated that the suspects were booked on various drug and fraud charges. It reported that law enforcement was working with local, state, and federal agencies. [5](#)

Item	Status in cited public reporting	Qualification
January 17, 2018 arrest / January 19 reporting	The reports describe arrests occurring in the investigation and identify Robert Sagarang among the named suspects. 4	Reporting of an arrest is not a conviction.
Alleged identity-fraud ring	Both reports describe allegations involving fraud/identity theft and vacation-property rentals. 4	Allegations are not adjudicated findings.
More than 300 affected individuals	St. George News reported that law enforcement found information belonging to more than 300 individuals. 4	This is a report of law-enforcement allegations/evidence, not a judicial finding.
Fraudulent IDs, financial cards, and document-making equipment	Both reports describe seized items of that kind. 4	The reports do not establish ultimate ownership, intent, guilt, or disposition.
Alias “Charles Ruiz”	Brandon supplied this assertion.	Not independently verified in the cited reports included here.
Five years in prison / conviction	Brandon states Robert told him he spent approximately five years in prison and said Brandon could “google it.”	No conviction or sentence record is cited in this document; verify before relying on it.

Significance Asserted by Brandon

Brandon’s stated concern is that Marc promised the Operations Manager role to Robert over Brandon, despite Brandon’s reported clean record and Nicole’s alleged view that Brandon was the most qualified candidate. Brandon also states that Robert works at a company managing affordable housing and may have access to tenants’ personal information, Social Security numbers, and financial data. These points are included to preserve Brandon’s reasoning about promotion decisions and operational risk; they are not independent findings regarding fitness, security controls, a criminal conviction, or the handling of tenant data.

5. PropertyMax.ai Compared with Brandon's Prototype

Marc's PropertyMax.ai — Brandon's Assessment

Brandon states that **PropertyMax.ai** was built by hired developers over more than one year. His assessment is that it has poor execution, lacks intuitive flow, and is not user-friendly, while Marc is attempting to sell it for millions of dollars. Brandon describes it as primarily a data-entry portal in which managers manually enter and retrieve information.

Brandon identifies the following categories in Marc's product: Dashboard, Inspections, Tasks, Call Recordings, Appointments, Capital Improvements, and CRM functions for Prospects, Tenants, Maintenance, Vendors, and Job Inquiries. Brandon also states that Marc dismissed Brandon's MVP, pitch deck, and investor-dialogue scripts, then brought in a friend from his car club to sell the product to investors; Brandon reports that effort did not succeed.

Brandon's Prototype

Brandon identifies his prototype at dashboardenhanced.manus.space and describes it as an operational command center rather than a filing interface. The following comparison preserves Brandon's feature inventory and stated product distinction.

Area	Brandon's description of PropertyMax.ai	Brandon's description of his prototype
Core model	A portal for manual data entry and retrieval.	An intelligent action inbox that prioritizes what a manager should address next.
Prioritization	No comparable automated prioritization identified in Brandon's notes.	Automatically surfaces urgent, overdue, and unassigned work; organizes Today's Priority, My Open, Follow-Ups, Leasing Pipeline, Resident Service, Rent + Collections, Waiting on Others, and Unassigned.
Performance management	Dashboard/data-entry framework.	Manager profile with a "Golden Score" performance metric, multi-property view, and manager assignments.
Portfolio operations	Categories for operational records and CRM inputs.	Portfolio-level Vacancy Factor, Available Units, Pre-Leased percentage, collections at a glance, delinquency by unit and dollar amount, and escalation actions.
Manager actions	Manual retrieval and data entry.	One-click Resolve, Call, Snooze, and Open actions; Call Workbench, Calendar, Activity Feed, sentiment indicators, and AI Sync processing.

Brandon's stated distinction is: **PropertyMax.ai is a filing cabinet**—users put information in and pull information out—whereas **his prototype is a command center**—it prioritizes actions, tracks performance, and surfaces problems before escalation. This is Brandon's product assessment and should be substantiated with dated product captures, demos, requirements, roadmap documents, and user feedback if it is later used in a business or legal context.

Additional Tools Built by Brandon

Brandon reports building the following additional tools: the Monthly Inspections Scraper, Vacancy Report, Operations Hub, Loss to Lease Report, Investor Summary Portal for K-1 distributions, Flyer Generator, New Hire/Onboarding Ecosystem, Marc's Report Preferences tool, Rental Comps API, Cost Segregation Study tools, Regional Manager Data Collection, an AI Learning Portal built for Marc's daughter, and a recording-automation pipeline with a golden button and scheduled processing.

Tool or system	Brandon's stated purpose
Monthly Inspections Scraper	Automated bot scheduled to collect monthly inspection information.
Vacancy Report / Operations Hub / Loss to Lease Report	Operational visibility into vacancies, portfolio activity, and lease-related performance.
Investor Summary Portal	K-1 distribution-related investor summary interface.
Flyer Generator	Creation of marketing materials.
New Hire/Onboarding Ecosystem	Structured onboarding for new employees.
Marc's Report Preferences tool	Capture and application of reporting preferences.
Rental Comps API	Deployed, live rental-comparables capability.
Cost Segregation Study tools	Property-tax/depreciation analysis workflow tools.
Regional Manager Data Collection	Collection and organization of regional-manager information.
AI Learning Portal	Learning portal Brandon states he built for Marc's daughter.
Recording automation pipeline	Golden-button trigger and scheduled recording-processing workflow.

6. Side Business Strategy — Automation Consulting

Proposed Business Model

Brandon's plan is to build an automation-consulting business for small businesses **outside property management**. The proposed services include Zapier, Make.com, and n8n workflows; AI chatbots; CRM automation; and email-marketing automation. Target industries include restaurants, med spas, coaches, e-commerce businesses, and real-estate agents, while excluding property-management clients.

Business component	Brandon's proposed approach
Target customer	Small businesses in non-property-management industries.
Core offerings	Workflow automation, AI chatbots, CRM automation, and email-marketing automation.
Build platforms	Zapier, Make.com, and n8n.
Setup pricing	Approximately 500–2,000 per automation setup.
Ongoing pricing	Approximately 200–500 per month for continuing management.
Income target	Brandon's estimate is 2,000–5,000 monthly as a side business with 5–10 recurring clients. This is a planning estimate, not a guaranteed outcome.

Claimed Legal and Operational Separation

Brandon identifies the following measures as supporting separation from ApartmentCorp: personal Manus subscription under **BrandonRose2@gmail.com**; personal GitHub account **BrandonRose2**; personal laptop; work performed at home after hours; no charge of overtime; a non-property-management target market; and purported geofence records that may show he was at home. California Labor Code § 2870 and Business and Professions Code § 16600 provide relevant legal context, but neither replaces review of the specific contract, projects, resource use, confidentiality duties, or trade-secret considerations. [1](#)

7. Key Contacts and Evidence Index

Brandon Rose

Field	Information
Name	Brandon Rose
Work email	brandon@apartmentcorp.com
Personal email	BrandonRose2@gmail.com
Phone	(323) 533-0117
Location	Sherman Oaks, CA 91403
Title	Special Projects

Marc Menowitz

Field	Information reported by Brandon
Role	Boss/owner at ApartmentCorp.
Office address	737 S. Genesee Avenue, Los Angeles, CA 90036.
LP entities	Fairfax Genesee Partners & Associates LP; Main So Central Associates LP; Midtown Manor Associates LP.
Recording/location practices	Brandon reports that Marc wears a Plaud recorder, geofences employees, and records through ConnectUC/UCConnect.
Workplace history assertions	Brandon reports that Marc lost sexual-harassment lawsuits and that seven people quit Brandon's position in eight months before Brandon. These assertions require independent verification before reliance.

Potential Witnesses

Person or group	Potential knowledge described by Brandon
Nicole	Operations Manager; reportedly told Brandon he was qualified to succeed her and may have knowledge of Marc's behavior and the interview warning.
Robert Sagarang	Reportedly received the Operations Manager role; may have direct knowledge of promotion discussions. Public reporting concerning a 2018 arrest/charges is separately addressed in Section 4. 4
Blake Weddington	Twenty-year company veteran who reportedly received Brandon's email listing tools Brandon built.
Ethan	Coworker whom Brandon states was screamed at by Marc in a recording.
Two unnamed coworkers	Brandon states they know he has the recorder.

Evidence Locations and Preservation Index

Evidence location	Described contents	Preservation considerations
Google Drive	Organized recordings with transcriptions, summaries, and voice profiles.	Retain original audio, export folder listings, preserve timestamps/version history, and document any processing steps.
GitHub — BrandonRose2	Timestamped commits for personal projects.	Preserve repository history, commit SHAs, branch/release metadata, settings, and local Git logs.
Personal Manus account	Task history associated with personal project work.	Export task history, timestamps, account/subscription records, and linked project material.
Marc's geofence system	Alleged location evidence distinguishing home and office.	Seek original system exports, retention-policy details, access logs, timestamps, and accuracy metadata.
ConnectUC/UCConnect	Workplace recordings potentially showing ApartmentCorp business subject matter.	Preserve the signed consent, notices, original recordings, transcripts, participant information, and retention policies.
"Marc's Inappropriate Outbursts" folder	Recordings said to document aggressive behavior.	Keep original files unchanged; record device/source, date, time, participants, transcript version, and any later edits.
Emails, chats, and calendar records	Potential support for promises, warnings, promotion discussions, recorder awareness, and product work.	Export in native form where possible, preserve headers/metadata, and avoid altering originals.

Consultation Questions and Record-Preparation Priorities

The following questions may help organize a consultation with qualified employment, intellectual-property, and privacy counsel. They are not legal conclusions.

Topic	Question for counsel or record review
Invention ownership	Which personal projects are within or outside any employment-agreement assignment provision, considering timing, scope, resources, and relevance to ApartmentCorp's business?
Noncompete and confidentiality	Which contractual provisions, if any, remain enforceable, and what safeguards are appropriate to avoid use or disclosure of confidential information or trade secrets?
Recordings	For each recording, was there a confidential communication, what notice/consent existed, and what restrictions govern preservation, disclosure, or potential use?
Workplace documentation	Which contemporaneous records and witnesses best corroborate the interview warning, promotion discussions, pay representations, surveillance, and alleged conduct?
Public-record statements	What official court records, if any, support or contradict assertions about Robert Sagarang's criminal case, conviction, or sentence?
Evidence handling	How should originals, metadata, transcript versions, cloud exports, and access logs be preserved to maintain integrity and privacy?
