1 Purpose and access

The Monthly Inspections Portal is the operational record for monthly property patrol inspections. It combines manual check-off control with the **MyLoneWorkers scraper** process, inspection PDF storage, one-page reports, email drafts, history, and a review queue for property-name changes.

Open the portal at monthlycheck-tukrskz5.manus.space. The active month is shown beneath the header controls. Use the left and right arrows to move between months and the year control to select the correct reporting period before creating a report.

1.1 Before running a report

Confirm that the month in the header is the month you intend to review. A completed property displays a green checkmark; an issue or missing inspection displays a red X. A blue PDF indicator means an inspection report is stored for that property. Notes can be added directly beneath each property row.

The dashboard also displays a yellow mapping-health alert when a property does not have a MyLoneWorkers mapping. These properties require manual tracking because the automatic scraper cannot retrieve their patrol events. Select the alert or choose **Alias Audit** to see the affected properties.

Control	What it does
Run Scraper	Collects MyLoneWorkers patrol results for a chosen month or range.
Summary	Opens the one-page selected-month report.
Compare	Compares the selected month with the prior month.
Draft Emails	Builds follow-up messages for properties with issues.
Saved Runs	Shows completed scraper runs and their saved results.
Naming	Sets the naming pattern for saved runs and downloaded PDFs.
Alias Audit	Reviews proposed property-name changes and mapping health.

2 Run the MyLoneWorkers scraper

2.1 Select the reporting range

1. Select **Run Scraper** in the dark blue header.
2. In the range selector, choose a quick preset such as **This Month**, **Last 3 Months**, **Last 6 Months**, or **Year to Date**. For a custom run, choose the month and year in both the **From** and **To** panels.
3. Review the green **Selected Range** card. It states the start month, end month, and the exact number of months that will be processed. If the end date is earlier than the start date, correct the range before continuing.
4. Select **Start Scraper**.

2.2 Monitor and save the run

The progress window records each month and property as it is processed. The scraper checks mapped properties, retrieves available PDFs, saves them to the portal, and updates the month's pass/issue status. When the run finishes, review the pass, issue, total-property, and PDF counts in the completion panel.

Each completed batch is saved automatically. Select **Saved Runs** to review its date range, result counts, and timestamp. You may rename a saved run for a clearer operational label or remove an obsolete run record. Removing a saved run does not remove the inspection records or stored PDFs.

2.3 Review exceptions

After the scraper finishes, choose each month in the selected range from the dashboard header. Check red X rows first, open stored PDFs where available, and add a concise note if a follow-up is required. Properties with a **Not mapped** badge must be reviewed or updated manually because they were intentionally excluded from automatic scraping.

3 Create, print, and download reports

3.1 Selected-month Summary report

1. Navigate to the month you want to report.
2. Select **Summary** in the header.
3. The Summary view presents all properties by region with their current status, manager, extension, and notes.
4. Select **Print Report** to use the browser print dialog, or select **Download PDF** to save a one-page landscape PDF.

The Summary PDF filename follows the active Summary rule in the **Naming** screen. The default format is `Inspection-Summary-{month}.pdf`.

3.2 Month-to-month Compare report

1. Navigate to the later month of the pair you want to review.
2. Select **Compare**.
3. Review the Regressed, Improved, Consistent Pass, and Persistent Fail sections.
4. Select **Print Report** or **Download PDF** from the upper-right corner.

The Compare PDF filename uses the Compare rule in **Naming**. The default format is `Comparison-{previous}-vs-{month}.pdf`.

3.3 Draft follow-up emails

When a selected month contains issues, the red **Draft Emails** button shows the count. Open it to review property-specific drafts, copy a draft, or open it in your email application. Review each recipient, message, and PDF link before sending. The stored signature is included in the draft formatting.

4 Set saved-run and PDF names

Select **Naming** in the header to manage labels for saved scraper runs, Summary PDFs, and Compare PDFs. You can use these placeholders in a template:

Placeholder	Value inserted
{month}	The currently selected report month, such as June 2026.
{previous}	The month before the selected month.

{start}	The first month in the selected scraper range.
{end}	The last month in the selected scraper range.
{count}	The total number of months in the selected scraper range.

The portal shows a live preview beneath each rule. Enter a name without the .pdf extension; downloaded reports add it automatically. Use **Restore defaults** if you need to return to the original naming pattern.

5 Manage property-name changes and mappings

Select **Alias Audit** to maintain an operational review queue for future property-name changes.

1. Review the mapping-health panel on the left. It lists each manually tracked property that does not yet have a MyLoneWorkers mapping.
2. To request a name change, choose the property's region, select its current portal name, and enter the proposed name.
3. The proposal appears in the **Pending** queue. Select **Edit** to correct the region or either name before deciding.
4. Select **Approve** or **Reject**, optionally adding a decision note. The result remains in the audit history for accountability.

> Approval documents the decision; it does not automatically alter the active property directory or create a MyLoneWorkers worker mapping. Apply approved changes deliberately so historical inspection records and scraper mappings remain accurate.

6 Monthly operating cadence

The automated monthly report is scheduled for the 21st at 8:00 a.m. Central time. It runs the scraper, saves available PDFs, and sends the owner's HTML report. Use the manual workflow whenever you need an earlier report, need to re-run a corrected range, or need a custom one-page Summary or Compare PDF. For reliable reporting, finish review of unmapped properties before finalizing the month, verify red X entries with the appropriate manager, and retain notes that explain exceptions. Use **History** to review past months and identify recurring inspection issues.

7 Quick troubleshooting

Situation	Recommended action
The scraper reports an authentication error.	Stop the run and have an administrator update the MyLoneWorkers password in the portal configuration before retrying.
A property has a yellow Not mapped badge.	Review it manually and obtain the appropriate MyLoneWorkers worker ID before requesting a new mapping.
A PDF is missing.	Confirm the patrol event exists in MyLoneWorkers, then rerun the affected month or attach the PDF manually.

The wrong month appears in a report.	Close the report, select the intended month in the dashboard header, and open Summary or Compare again.
A property needs a new operational name.	Create an Alias Audit entry, then obtain approval before changing the active directory and mapping.

8 Glossary

Term	Meaning
MyLoneWorkers scraper	The process that checks patrol activity, updates status, and stores available inspection PDFs.
Summary report	A one-page report for the selected inspection month, grouped by region.
Compare report	A side-by-side comparison of the selected month and the previous month.
Mapping health	Whether a portal property is connected to a valid MyLoneWorkers worker mapping for automatic scraping.
Alias Audit	The review queue for proposed property-name changes, decisions, and notes.
