

My Future Capacity + Skills Passport

A verified capability infrastructure for education, workforce, and mobility.

We turn learning, work, and life evidence into portable, verified, opportunity-ready capability signals — the missing infrastructure layer between human potential and economic opportunity.

Founded by Dr. Jamie Valenzuela-Mumau, former superintendent and system leader committed to making human capacity visible, portable, and usable.

contact@myfuturecapacity.com

We Measure What's Easy, Not What Matters

Today's systems produce signals that are fragmented, unverified, and untranslatable — failing learners, institutions, and employers simultaneously.

Fragmented Signals

Transcripts, resumes, job postings, and assessments exist in silos. No single system connects them into a coherent capability picture.

Unverified Claims

Durable skills — collaboration, persistence, communication — remain subjective, self-reported, and weakly evidenced. Employers cannot trust them.

Mismatched Expectations

Education outputs rarely translate into employer-ready signals. Institutions certify completion; employers need demonstrated capacity.

From Experience to Verified Opportunity Signals

A two-layer platform that moves learners from self-discovery to verified, opportunity-linked capability profiles.

Layer 1 — My Future Capacity

- Pathway discovery and career fit
- Strengths, interests, and identity mapping
- Learner profile and evidence capture
- Guided visibility into opportunity

Layer 2 — Skills Passport

- Evidence ingestion across contexts
- AI + human verification workflow
- Alignment to recognized standards
- Portable, trusted capability profile
- Opportunity-linked skill signaling

We turn learning, work, and life evidence into portable, verified, opportunity-ready capability signals.

How the System Works

Beneath this flow, the inferential architecture moves from raw evidence through context and development stages to establish genuine capacity and confidence — not just completion.

Learner Profile Personalized, living dashboard of strengths and growth	Evidence Repository Structured capture across academic, work, and life contexts	Verification Workflow AI-assisted review with human validation against standards	Portable Output Planned outputs include verified PDF, shareable link, QR code, and employer/API pathways.

Why This Category Is Emerging Now

39%

Workforce Disruption

of workers' core skills are expected to change by 2030. Durable, verified skills are the most resilient human assets.

World Economic Forum 2025

70%

Skills-Based Hiring

of employers report using skills-based hiring — but lack trusted, portable signals to act on it.

NACE 2026

Jan 2026

Credential Transparency

California now requires LEAs serving grades 9–12 to enter a CCGI data-sharing partnership by January 1, 2026, with an initial data file due June 30, 2026.

California Department of Education / CCGI

Now

Accountability Pressure

Institutions are under growing pressure to demonstrate graduate readiness, not just attainment, creating urgent demand for verified outcome infrastructure.

A Large, Urgent, and Underserved Market

Market Sizing

TAM — 26.1M Learners

U.S. public grades 9–12 plus U.S. community college students. Core ARR at \$15/learner annually: \$391.5M

SAM — 4,090,303 Learners

California public grades 9–12 (1,890,303) plus California Community Colleges (2.2M across 116 colleges). Core ARR at \$15/learner annually: \$61.35M

SOM — 85,000 Learners in 36 Months

California-first reachable wedge, workforce-aligned pathways, ages 16–24. Core ARR at \$15/learner annually: \$1.275M — 2.08% of California SAM.

Initial Wedge Strategy

We enter through the highest-pain, most policy-aligned channels first — where verified capability signals are already demanded and where public subsidy de-risks early adoption.

- Community colleges and CTE programs
- Workforce development boards
- District and county workforce pilots
- Learners ages 16–24 in career-aligned pathways
- California-first regional entry point

California public grades 9–12 enrollment: 1,890,303 · California Community Colleges: 2.2M students across 116 colleges · U.S. community colleges: 1,000+ institutions serving ~10.5M students

The wedge is focused. The infrastructure opportunity is broad.

A Multi-Sided Revenue Model with Clear Expansion Paths

Primary Revenue Architecture

- Core platform revenue is currently modeled at \$15 per active learner annually.
- Additional revenue layers include employer access, verification-related services, and premium analytics/API integrations.
- Commercial pricing will be finalized by pilot scope, learner volume, workflow complexity, and enterprise configuration.

Why Multi-Sided Works Here

Learners access the platform free — driving adoption and profile volume. Institutions, employers, and public systems each extract distinct value and each has a clear reason to pay. Network effects compound with every verified profile created.

Learners must access the platform at little or no direct cost to drive adoption. Institutions, employers, and public systems each extract distinct value, and each has a credible path to pay.

Built, Tested, and Entering the Market

PRODUCT READINESS

- Live MVP in active QA and refinement
- Learner profile, evidence repository, and verification workflow built
- Technical stack established with integration infrastructure underway
- Portable output formats in development — planned outputs include verified PDF, shareable link, QR code, and employer/API pathways.

MARKET ENGAGEMENT

- Active conversations with community college partners
- District and county workforce program discussions in progress
- Early workforce board engagement in California region

EARLY VALIDATION

- Prototype reviewed by early educators and workforce practitioners
- Founder brings direct domain credibility as former superintendent
- CTE and career pathway alignment confirmed through institutional dialogue

☐ This is beyond concept stage. The product exists, the market is engaged, and the founder has lived this problem from inside the system.

☐ Commercial validation is being advanced through 2–3 anchor pilot conversations designed to convert into first recurring institutional revenue upon milestone completion.

Start Where the Pain Is Highest

Phase 1: Wedge

Pilot with colleges, CTE, workforce boards.

Phase 3: Platform Scale

Expand to enterprise and regional infrastructure.

Phase 2: Employer Channels

Build hiring pipelines and portable profiles.

Customer Acquisition Logic

- **Pilot-to-reference model:** Each pilot becomes a case study and referral anchor
- **Anchor partners:** 2–3 institutional partners generate credibility and network access
- **Regional conveners:** Workforce boards and county offices connect us across districts
- **Public channel alignment:** Policy mandates and workforce funding create pull, not just push

This is a wedge strategy, not a boil-the-ocean strategy.

Existing Tools Cover Pieces. We Build the Layer Across Them.

The category is crowded with point solutions: exploration tools, planning platforms, badge systems, transcripts, and hiring networks. California already has a statewide planning layer through CaliforniaColleges.edu. What remains missing is the verification and translation layer that makes skills portable and trusted across systems.

Capability	Career Tools	Portfolios	Badges	Transcripts	Hiring Platforms	Us
Verified, not self-claimed	☒	☒	Partial	☒	☒	✓
Portable across systems	☒	☒	Partial	☒	☒	✓
Evidence-backed	☒	Partial	Partial	☒	☒	✓
AI + human trust model	☒	☒	☒	☒	☒	✓
Opportunity-linked	Partial	☒	☒	☒	✓	✓
Infrastructure layer	☒	☒	☒	☒	☒	✓

Existing tools cover pieces of exploration, planning, or signaling. We build the verification and translation layer across those systems.

FOUNDER

Dr. Jamie Valenzuela-Mumau

Former Superintendent | System Leader | Education-to-Workforce Strategist

Led district-level systems serving thousands of learners. Built from inside the places where the translation between learning and opportunity breaks down.

FOUNDING TEAM

Built by a System Leader Who Has Lived the Problem

The founder brings rare credibility: a former superintendent who led from inside the education system and understands exactly where the translation layer breaks down between learning and workforce opportunity.

Three-Year Revenue Outlook — Bridge Case Base Scenario

This is a bridge-case base forecast, not a full-scale financing case. Full financial projections, including expense structure, burn, runway, and downside sensitivity, are included in the supporting financial package.

These projections are governed by staged pilot conversion assumptions and should be interpreted alongside the bridge milestones and sensitivity cases.

Core Growth Assumptions

Pilot Conversion

2–3 anchor pilots convert into first institutional revenue in Year 1–2

Institution Expansion

Reference-model growth supports selective regional expansion in Year 2

Employer Adoption

Employer subscriptions begin layering in as verified profile volume and partner confidence increase

Recurring Revenue Mix

Verification services and analytics/API layers expand the recurring base over time

\$250,000 Bridge Round to Fund Pilot Validation and Milestone Readiness

The Ask

\$250,000

- 100–300 learners in active pilot cohort
- 6-month structured pilot window
- 2–3 career pathways verified end-to-end
- 2–3 anchor institutional partners

Use of Funds

- Product hardening / engineering — \$85,000 (34%)
- Pilot implementation / customer success — \$50,000 (20%)
- Founder and fractional leadership cash comp — \$60,000 (24%)
- Legal, accounting, insurance, compliance — \$25,000 (10%)
- Go-to-market and travel — \$20,000 (8%)
- Contingency — \$10,000 (4%)
- **Total:** \$250,000 (100%)

This bridge round funds pilot execution, workflow hardening, lean operating continuity, diligence readiness, and proof-point generation. It is designed to validate conversion assumptions, strengthen the verification workflow, and position the company for a larger seed round. It does not fund full-scale regional expansion.

Investment Instrument

Open to SAFE, equity, pilot sponsorship, grant-backed pilot capital, or strategic partner capital. Structure is flexible and designed to match the right partner.

What This Capital Unlocks

The bridge is designed to produce investor-grade proof points across product readiness, partner conversion, verification quality, and employer signal value.

Key Outcomes

1. Verified profile completion rate across the pilot cohort
2. Employer validation rate on verified skill signals
3. Anchor partner conversion readiness into recurring institutional revenue
4. Evidence package and diligence readiness for seed financing

The bridge case assumes a milestone-based follow-on seed round in Year 2 after pilot completion, partner conversion progress, and validation of the revenue model.

From Pilot Validation to Category Infrastructure

Months 1–3

Launch pilot cohort. Deploy with anchor partners. Begin evidence capture, workflow hardening, and verification operations.

Months 4–6

Validate outcomes. Generate verified profiles. Collect employer feedback and establish the first proof points for partner conversion.

Months 7–12

If pilot milestones are met, convert qualified anchor partners into first recurring institutional revenue and prepare a Year 2 seed raise.

Months 13–24

Subject to follow-on financing and partner conversion, expand interoperability, employer participation, and regional infrastructure partnerships.

We are building the trusted infrastructure layer that helps human capability become visible, portable, and usable across education and work.
