

Wellness Inventory Manager

Complete How-To Guide

This guide walks you through every feature of your wellness product inventory app — from adding your first product and printing QR labels, to scanning with your phone camera and exporting reports. A live test QR code is included on the final page.

Your App URL: <https://wellnessinv-zcjme6yy.manus.space>

Contents

#	Section	What You'll Learn
1	App Overview	Pages, navigation, and what each section does
2	Adding a Product	Create your first wellness product with SKU & pricing
3	Generating a QR Label	Print a scannable label for your bottle or packaging
4	Scanning with Your Phone	Use your phone's rear camera to update stock instantly
5	Manual SKU Lookup	Type a SKU when the QR code is damaged or unreadable
6	Adjusting Stock	Record stock in, stock out, or manual corrections
7	Low Stock Alerts	Set thresholds and act on reorder notifications
8	Exporting Data	Download CSV reports for products and transactions
9	Test QR Code	A real scannable QR label to practice with right now

1 · App Overview

The Wellness Inventory Manager is a browser-based app — no installation required. All data is saved locally in your browser, so it works offline once loaded. Navigate using the green sidebar on the left.

Page	Icon	Purpose
Dashboard	■	Summary stats, total inventory value, recent activity, and quick links

Products	■	Full product catalog — add, edit, delete, adjust stock, view QR labels
QR Scanner	■	Activate phone/webcam camera to scan QR labels and update stock
Transactions	■	Complete history of every stock movement with filters and CSV export
Alerts	■	Low-stock and out-of-stock notifications with dismiss controls

2 · Adding a Product

Step 1 — Open the Products page

- Click Products in the left sidebar.

Step 2 — Click Add Product

- The green Add Product button is in the top-right corner of the page.

Step 3 — Fill in the product form

- Product Name — e.g. Lavender Calm Tincture
- SKU — a short unique code you choose, e.g. WEL-LAV-001 (this is what manual lookup uses)
- Category — choose from the dropdown (Tinctures, Supplements, Oils, etc.)
- Quantity — current stock count
- Unit — bottles, jars, packets, etc.
- Price — cost per unit in dollars
- Supplier — who you source it from
- Low Stock Threshold — the quantity at which you want an alert (e.g. 5)

Step 4 — Click Save

- The product appears in your catalog grid immediately.

■ *Tip: Use a consistent SKU format like WEL-[CATEGORY]-[NUMBER] (e.g. WEL-OIL-003) so they are easy to remember and type during manual lookup.*

3 · Generating a QR Label

Every product in your inventory has a unique QR code that encodes its ID. Scanning it with the app instantly pulls up that product for a stock update.

Step 1 — Find your product on the Products page

- Each product card has a row of action buttons at the bottom.

Step 2 — Click the QR icon button

- The small QR code icon opens the QR Label dialog.

Step 3 — Print the label

- The dialog shows a large QR code with the product name, SKU, and category.
- Click Print Label — your browser's print dialog will open.
- Print on label paper (e.g. Avery 2×2 labels) or plain paper and cut to size.
- Stick the label on your bottle, jar, or packaging.

■ *Tip: Print labels in batches when you receive new stock. Keep a spare printed sheet in case a label gets wet or damaged — or use the Manual SKU Lookup as a backup (Section 5).*

4 · Scanning with Your Phone Camera

The QR Scanner page uses your device's camera directly in the browser — no app download needed. It defaults to the rear (back) camera on phones.

Step 1 — Open the app on your phone

- Type the app URL in your phone's browser: `wellnessinv-zcjme6yy.manus.space`
- Or bookmark it on your home screen for one-tap access.

Step 2 — Go to QR Scanner

- Tap QR Scanner in the sidebar (tap the ■ menu icon if the sidebar is hidden).

Step 3 — Start the camera

- Tap Start Camera Scanner.
- Your browser will ask for camera permission — tap Allow.
- The rear camera activates with a green targeting frame.

Step 4 — Scan the label

- Hold the QR label steady inside the green corner brackets.
- Keep 4–8 inches (10–20 cm) distance for best results.
- The app detects the code automatically — no button press needed.

Step 5 — Update the stock

- The product name and current stock appear on screen.
- Tap Update Stock to open the adjustment dialog.
- Choose Stock In, Stock Out, or Adjustment, enter the quantity, and tap Confirm.

Situation	Solution
Camera permission denied	Phone Settings → Browser → Camera → Allow
QR code not detecting	Ensure good lighting; move closer or farther
Wrong camera (front instead of back)	Tap the flip icon (■) in the top-right of the scanner
App URL not loading	Check Wi-Fi/data connection; try refreshing

QR code damaged

Use Manual SKU Lookup (Section 5) instead

5 · Manual SKU Lookup

If a QR label is torn, wet, or unreadable, you can look up any product by its SKU directly on the QR Scanner page — no camera needed.

Step 1 — Go to QR Scanner

- Scroll down past the camera viewport to find the Manual SKU Lookup card.

Step 2 — Type the SKU

- Enter the product's SKU in the text field (e.g. WEL-LAV-001).
- The lookup is case-insensitive — WEL-lav-001 works the same as WEL-LAV-001.

Step 3 — Press Enter or tap Look Up

- If the SKU matches a product, it appears instantly — same as a successful scan.
- Tap Update Stock to proceed with the stock adjustment.
- If no match is found, double-check the SKU on the product's card in the Products page.

6 · Adjusting Stock

Stock adjustments can be made from three places: after scanning a QR code, after a manual SKU lookup, or directly from the Stock button on any product card.

Type	When to Use	Effect on Quantity
Stock In	Received new shipment / restocked	+ adds to current quantity
Stock Out	Sold, used, or shipped products	– subtracts from quantity
Adjustment	Correcting a count after a physical inventory	Sets quantity to exact value

Each adjustment is logged in the Transactions page with a timestamp, type, quantity change, and any notes you add. This creates a full audit trail of your inventory movements.

7 · Low Stock Alerts

The app automatically monitors every product's quantity against its Low Stock Threshold. When stock falls at or below that threshold, an alert is created.

Step 1 — Set a threshold when adding/editing a product

- The Low Stock Threshold field in the product form controls when alerts fire.
- Example: set to 5 if you want a warning when fewer than 5 bottles remain.

Step 2 — View alerts

- Go to Alerts in the sidebar — active alerts are listed with severity (Low Stock / Out of Stock).
- The Dashboard also shows a live count of active alerts in the stat cards.

Step 3 — Act on an alert

- Each alert card has a Restock button — click it to open the stock adjustment dialog directly.
- Once restocked above the threshold, the alert clears automatically.
- You can also Dismiss an alert without restocking (e.g. if the product is discontinued).

8 · Exporting Data

Export your data to CSV (spreadsheet) format at any time — useful for record-keeping, sharing with a supplier, or importing into accounting software.

Export Type	How to Access	What's Included
Product Catalog CSV	Dashboard → Export CSV or Products page → Export CSV	All products: name, SKU, category, quantity, unit, price, supplier, threshold
Transactions CSV	Transactions page → Export CSV	All stock movements: date, product, type (in/out/adj), quantity change, notes

■ *Tip: Export your product catalog after adding all your products as a backup. Since data is stored in your browser, clearing browser data will erase it — regular CSV exports are your safety net.*

9 · Test QR Code — Try It Now

The QR code below is a real, scannable label for a demo product. Follow these steps to do a complete end-to-end test:

1. Open the app on your phone: wellnessinv-zcjme6yy.manus.space
2. Go to Products → Add Product and create the product below (copy the details exactly)
3. Go to QR Scanner and tap Start Camera Scanner
4. Point your phone camera at the QR code on this page
5. The app should find 'Lavender Calm Tincture' — tap Update Stock
6. Choose Stock Out, enter 2, add a note 'Test scan', and tap Confirm
7. Go to Transactions — your test movement should appear at the top
8. Go to Dashboard — the inventory value and counts should have updated

Product details to enter in the app:

Field	Value to Enter
Product Name	Lavender Calm Tincture
SKU	WEL-LAV-001
Category	Tinctures
Quantity	24 bottles
Unit Price	\$28.50
Supplier	Botanical Roots Co.
Low Stock Threshold	5 bottles

**WELLNESS INVENTORY****Lavender Calm Tincture****SKU:** WEL-LAV-001

Tinctures · Bottles

Stock: 24 bottles

Supplier: Botanical Roots Co.

TEST LABEL — Scan to practice

■ **Important:** This QR code only works after you have added the test product to your app using the exact SKU shown above (WEL-LAV-001). The QR code encodes the product's internal ID — if the product doesn't exist in your inventory yet, the scanner will show 'Product not found'.
