1. App Overview & Navigation

What the app does and how to get around

The Wellness Inventory Manager is a browser-based tool designed specifically for small wellness product businesses. It lets you track every bottle and batch, generate QR codes for your labels, ship orders and photograph receipts, and give customers a beautiful thank-you experience — all without needing any external software or account.

The Sidebar

The dark green sidebar on the left is your main navigation. It is always visible on desktop and slides in from a hamburger menu on mobile.

Dashboard	Overview of your entire inventory — totals, alerts, recent activity
Products	Your full product catalog — add, edit, delete, adjust stock, ship, and print QR labels
QR Scanner	Scan a QR label with your phone camera to instantly look up a product
Shipments	All outgoing orders — create, track status, scan receipts, mark fulfilled
Transactions	Full history of every stock movement (in, out, adjustment)
Alerts	Low stock and out-of-stock notifications
Settings	Save your brand name, website URL, default carrier, and thank-you message

■ **TIP:** All data is saved automatically in your browser's local storage — no account or internet required to use the app after it loads.

■■ **NOTE:** Because data is stored in your browser, it stays on the device you use. If you switch browsers or clear browser data, your inventory will be reset.

2. Dashboard

Your inventory at a glance

The Dashboard is the first page you see when you open the app. It gives you an instant snapshot of your entire inventory without needing to dig into individual pages.

What You'll See

Total Products	Count of all products currently in your catalog
In Stock	Products with quantity above their low-stock threshold
Low Stock	Products at or below their threshold but not yet zero
Out of Stock	Products with zero quantity remaining
Total Inventory Value	Sum of (price × quantity) across all products
Active Alerts	Live list of low/out-of-stock warnings — click any to go to Alerts
Recent Activity	The 5 most recent stock transactions
Quick Links	One-click buttons to Manage Products, Scan QR Code, and View History

Actions from the Dashboard

The **Export CSV** button in the top-right downloads your full product catalog as a spreadsheet. The **+ Add Product** button opens the Add Product dialog directly.

3. Products — Adding & Managing Inventory

Your complete product catalog

The Products page is the heart of the app. Every wellness product you sell lives here, with its current stock level, category, price, and supplier. From each product card you can adjust stock, generate a QR label, edit details, create a shipment, or delete the product.

Adding a New Product

1 Click '+ Add Product'

Find the button in the top-right of the Products page or the Dashboard.

Fill in the product details

Enter the product name, SKU (your unique code, e.g. WEL-LAV-001), category, description, starting quantity, unit (bottles, oz, ml, etc.), price per unit, and supplier name.

3 Set the Low Stock Threshold

This is the quantity at which you want to be alerted. For example, if you set it to 5, you'll get an alert when stock drops to 5 or below.

Click 'Save Product'

The product appears in your catalog immediately. You can now generate a QR label for it.

Product Card Actions

Stock button	Opens the Stock Adjustment dialog to add stock in, take stock out, or set an exact quantity
QR icon (■)	Opens the QR Label dialog — generate and print a label for this product
Ship button (■)	Opens the Create Shipment dialog — log an outgoing order for this product
Edit icon (—■)	Re-opens the Add Product form pre-filled with this product's details
Delete icon (■■■)	Permanently removes the product and all its transaction history

Filtering & Searching

Use the search bar to find products by name, SKU, or supplier. Use the Category and Status dropdowns to narrow down the list. All filters work together in real time.

Product Fields Reference

Name	Full product name, e.g. 'Lavender Calm Tincture'
SKU	Your unique product code, e.g. 'WEL-LAV-001'. Used for manual lookup.
Category	Choose from: Tinctures, Supplements, Topicals, Teas & Herbs, Oils, Capsules, Powders, Other
Description	Optional notes about the product
Quantity	Current stock level (units on hand)
Unit	What one unit is: bottle, oz, ml, g, capsule, etc.
Low Stock Threshold	Alert triggers when quantity $\leq$ this number
Price	Price per unit in USD — used for inventory value calculation
Supplier	Name of your supplier or manufacturer

4. QR Code Labels — Generate & Print

Create scannable labels for your bottles

Every product in your inventory can have a printed QR label. When scanned, the QR code identifies the product so you can instantly update stock — no typing needed. Once you create a shipment, the QR label encodes a customer tracking URL so buyers can scan it to see their Thank You page.

Generating a Label

1 Go to Products

Find the product you want to label in your catalog.

Click the QR icon on the product card

The QR Label dialog opens showing a printable label with the product name, SKU, category, and a large QR code in your brand's forest green color.

3 Click 'Print Label'

A print-ready window opens. Use your browser's print dialog to print to paper or save as PDF. The label is sized for standard label paper.

Stick the label on your bottle

Affix the printed label to your product packaging. You're ready to scan!

Sample QR Label

Below is an example of what a printed QR label looks like. This one encodes the product data for 'Lavender Calm Tincture' (SKU: WEL-LAV-001):

■ **TIP:** Print labels on Avery 5160 or similar address label sheets for easy peel-and-stick application on bottles.

5. QR Scanner — Scan with Your Phone

Use your phone camera to look up products instantly

The QR Scanner page uses your device's camera to scan any QR label you've printed. It works in any modern browser on your phone — no app download required. The scanner automatically uses your rear (back) camera for the best scanning angle.

How to Scan

1 Open the app on your phone

Navigate to the app URL in Chrome (Android) or Safari (iPhone).

Tap 'QR Scanner' in the sidebar

The scanner page opens. On mobile, tap the hamburger menu (☰) first to open the sidebar.

3 Tap 'Start Camera Scanner'

Your browser will ask for camera permission — tap Allow.

Point the camera at a QR label

Hold your phone 4–8 inches from the label. The scanner detects the QR code automatically within 1–2 seconds.

5 Product found — update stock

The product details appear below the scanner. Choose Stock In, Stock Out, or Adjustment, enter the quantity, add an optional note, and tap Confirm.

Tap 'Stop Camera' when done

This turns off the camera to save battery.

Camera Controls

Switch Camera button	Appears while scanning — tap to toggle between front and rear camera
Stop Camera button	Turns off the camera feed
Camera Permission	If denied: go to your phone's Settings → Browser App → Camera → Allow

■ **TIP:** For best results, ensure good lighting and hold the phone steady. The QR code should fill at least 30% of the camera frame.

6. Manual SKU Lookup

Find a product by typing its SKU when the QR code is damaged

If a QR label is torn, smudged, or otherwise unreadable, you can look up any product by typing its SKU directly on the QR Scanner page. The lookup is case-insensitive and works exactly like a successful scan.

How to Use Manual Lookup

1 Go to QR Scanner

Scroll down below the camera scanner section.

Find the 'Manual SKU Lookup' card

It has a text field labeled 'Enter Product SKU'.

3 Type the SKU

Enter the SKU exactly as shown on the product card, e.g. WEL-LAV-001. It is not case-sensitive.

Press Enter or click 'Look Up'

The product details appear immediately — same as a successful QR scan.

5 Update stock as normal

Choose your adjustment type, enter quantity, and confirm.

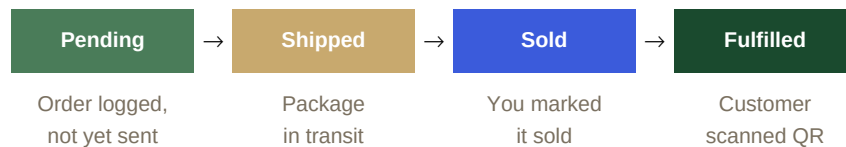

■ **TIP:** You can find a product's SKU on its card in the Products page. Consider writing the SKU on the inside of your packaging as a backup.

7. Shipments — Create & Track Orders

Log outgoing orders and track them from packed to fulfilled

The Shipments page tracks every order you send out. Each shipment is linked to a product, has a status that progresses from Pending to Fulfilled, and can hold a receipt PDF, tracking number, and your website link for the customer.

Shipment Status Flow

Creating a Shipment

1 Go to Products and find the product

Click the blue 'Ship' button on the product card.

Fill in the shipment details

Enter buyer name (required), tracking number, carrier (pre-filled from Settings), quantity being shipped, your website link (pre-filled from Settings), and optional notes.

3 Click 'Create Shipment'

The shipment is logged with Pending status. Stock is NOT automatically deducted yet — use the Stock Out button or the scanner to deduct when you actually pack the order.

Mark as Shipped

On the Shipments page, find the order and click 'Mark Shipped' when the package leaves.

5 Scan receipt (optional)

Click 'Scan Receipt' to photograph your postal receipt and save it as a PDF to this shipment.

Mark as Sold

Click 'Mark Sold' when payment is confirmed or the package is delivered.

7 Fulfilled automatically

When the customer scans the QR code on their package, the status updates to Fulfilled instantly.

Shipment Fields Reference

Buyer Name	Who the order is going to (required)
Tracking Number	Postal tracking number from your carrier
Carrier	Shipping service: USPS, UPS, FedEx, DHL, etc.
Quantity	Number of units being shipped
Website Link	Your store/website URL — shown to customer on Thank You page
Notes	Internal notes about the order
Receipt PDF	Photo of postal receipt, auto-converted to PDF by the Receipt Scanner

8. Receipt Camera Scanner — Photo to PDF

Photograph your postal receipt and save it as a PDF

The Receipt Camera Scanner lets you use your phone's camera to photograph a postal receipt and automatically save it as a PDF attached to a specific shipment. No scanning app needed — it works entirely in your browser.

How to Scan a Receipt

1 Go to Shipments

Find the shipment you want to attach a receipt to.

Click 'Scan Receipt'

This opens the Receipt Camera Scanner page linked to that specific shipment.

3 Allow camera access

Your browser will request camera permission — tap Allow.

Position the receipt

Lay the receipt flat on a well-lit surface. Hold your phone directly above it.

5 Tap 'Capture Photo'

The camera takes a photo of the receipt.

Review and confirm

A preview of the captured image appears. If it looks good, tap 'Save as PDF'. If not, tap 'Retake' to try again.

7 PDF saved to shipment

The receipt PDF is attached to the shipment record. You can download or preview it any time from the Shipments page.

■ **TIP:** For the clearest receipt scan: use bright, even lighting (avoid shadows), lay the receipt completely flat, and hold your phone parallel to the surface.

■■ **NOTE:** Receipt PDFs are stored in your browser's local storage. For long-term archiving, download the PDF immediately after saving.

9. Customer Thank You Page

What your customers see when they scan their QR label

When you create a shipment, the QR code on the product label is linked to a unique customer tracking URL. When your customer receives their package and scans the QR code, they land on a beautiful Thank You page — and your dashboard automatically updates to Fulfilled.

What the Customer Sees

Your brand name	Pulled from Settings → Brand Name
Personalized greeting	'Hi [Buyer Name]!' if a buyer name was entered on the shipment
Thank you message	Your custom message from Settings → Thank You Message
Order summary	Product name, quantity, carrier, and ship date
'Visit Our Website'	A button linking to your website URL from Settings or the shipment
Fulfilled badge	A green 'Order marked as Fulfilled' confirmation badge

What Happens on Your End

The moment a customer scans their QR code, the shipment status in your Shipments page changes from **Sold** → **Fulfilled** automatically. No action needed from you. If the customer scans it a second time, they see an 'Already Confirmed' message — the status does not change again.

■ **TIP:** Customize your Thank You message in Settings to make it personal and on-brand. Customers appreciate a warm, handcrafted feel.

10. Stock Adjustments — In / Out / Adjust

Update inventory quantities manually

Stock adjustments let you change a product's quantity for any reason — receiving a new shipment from your supplier, recording a sale, correcting a count error, or writing off damaged goods. Every adjustment is logged in the Transactions history.

Three Adjustment Types

Stock In	Adds quantity. Use when you receive new inventory from your supplier. Example: +24 bottles received from manufacturer.
Stock Out	Subtracts quantity. Use when you sell, use, or remove inventory. Example: -3 bottles sold at a market.
Adjustment	Sets the quantity to an exact number. Use when doing a physical count and correcting discrepancies. Example: set to 18 after counting.

How to Adjust Stock

1 Click 'Stock' on a product card

Or use the QR Scanner to scan the product's label first.

Choose the adjustment type

Select Stock In, Stock Out, or Adjustment from the tabs.

3 Enter the quantity

Type the number of units. A live preview shows the new total before you confirm.

Add an optional note

Notes help you remember why the adjustment was made — e.g. 'Received from supplier' or 'Sold at farmers market'.

5 Click 'Confirm'

The quantity updates immediately and the transaction is logged.

11. Transactions Log

Complete history of every stock movement

The Transactions page shows every stock change ever made in the app — stock ins, stock outs, and adjustments — in reverse chronological order. You can filter by type and search by product name.

What Each Transaction Shows

Date & Time	When the adjustment was made
Product Name	Which product was affected
Type	In (green), Out (red), or Adjustment (blue)
Quantity	How many units were added, removed, or set
Note	Any note you added when making the adjustment

Exporting Transactions

Click the **Export CSV** button at the top of the Transactions page to download the full transaction history as a spreadsheet. This is useful for bookkeeping, tax records, or sharing with a business partner.

12. Low Stock Alerts

Get notified before you run out

The app automatically generates alerts whenever a product's quantity falls at or below its Low Stock Threshold. Alerts also appear on the Dashboard so you never miss them.

Alert Types

Low Stock	Quantity is at or below the threshold but above zero. Shown in amber/yellow.
Out of Stock	Quantity has reached zero. Shown in red. Requires immediate restocking.

Managing Alerts

1 Go to Alerts in the sidebar

All active alerts are listed here, newest first.

Review each alert

Each card shows the product name, current quantity, and threshold.

3 Click 'Dismiss' on an alert

Removes it from the active list. It will reappear if the quantity drops again.

Click 'Dismiss All'

Clears all current alerts at once.

5 Restock the product

Go to Products, click Stock on the affected product, and add inventory.

■ **TIP:** Set your Low Stock Threshold to the minimum quantity you need to fulfill one week of orders. This gives you enough lead time to reorder.

13. Export to CSV

Download your data as a spreadsheet

You can export two types of data from the app: your product catalog and your transaction history. Both export as CSV files that open in Excel, Google Sheets, or any spreadsheet app.

Product Catalog Export

Click **Export CSV** on the Dashboard or the Products page. The file includes: SKU, Name, Category, Quantity, Unit, Low Stock Threshold, Status, Price, Supplier, and Last Updated date.

Transaction History Export

Click **Export CSV** on the Transactions page. The file includes: Date, Product Name, Type (In/Out/Adjustment), Quantity, and Note.

■■ **NOTE:** Export your data regularly as a backup. Since data is stored in your browser, exporting to CSV is the safest way to preserve your records.

14. Settings — Brand Defaults

Configure once, used everywhere

The Settings page lets you save your brand information so it automatically appears throughout the app — on QR labels, shipment forms, and the customer Thank You page. Settings are saved in your browser and persist between sessions.

Settings Fields

Brand / Business Name	Your business name. Appears in the sidebar, QR labels, and the customer Thank You page header.
Default Website URL	Your store or website URL. Pre-fills the Website Link field on every new shipment. Customers see a 'Visit Our Website' button linking here.
Default Carrier	Your most-used shipping carrier (e.g. USPS). Pre-fills the Carrier field on new shipments.
Thank You Message	The personal message customers read when they scan their QR label. Make it warm and on-brand.
QR Label Footer Text	A short tagline printed at the bottom of every QR label, e.g. 'Every bottle. Every batch. Always in hand.'

Saving Settings

Click the **Save Settings** button in the sticky bar at the bottom of the page. The button turns green and shows a checkmark when saved. Click **Reset to Defaults** to restore all fields to their original values.

15. Complete Workflow Walkthrough

End-to-end example: from adding a product to a fulfilled order

This walkthrough takes you through the full lifecycle of a product — from adding it to your inventory, printing a label, shipping an order, and receiving confirmation that your customer got it.

Example Product: Lavender Calm Tincture

Name	Lavender Calm Tincture
SKU	WEL-LAV-001
Category	Tinctures
Starting Quantity	24 bottles
Unit	bottle
Low Stock Threshold	5
Price	\$18.00
Supplier	Botanica Farms

Step-by-Step Walkthrough

1 Configure Settings first

Go to Settings. Enter your brand name (e.g. 'Green Roots Wellness'), your website URL, default carrier (USPS), and a thank-you message. Click Save Settings.

Add the product

Go to Products → + Add Product. Fill in all the fields from the table above. Click Save.

3 Print a QR label

On the product card, click the QR icon. In the dialog, click Print Label. Print on label paper and affix to your bottle.

Receive new stock

When a supplier shipment arrives, click Stock on the product card, choose Stock In, enter 24, add note 'Received from Botanica Farms', and confirm.

5 Create a shipment

A customer orders 2 bottles. Click Ship on the product card. Enter buyer name 'Jane Smith', tracking number, carrier USPS, quantity 2. Your website URL pre-fills automatically. Click Create Shipment.

Deduct the stock

Click Stock on the product card → Stock Out → 2 → note 'Shipped to Jane Smith' → Confirm.

7 Scan the postal receipt

At the post office, open the Shipments page on your phone. Find Jane's shipment. Tap Scan Receipt. Photograph the receipt. Tap Save as PDF.

Mark as Shipped

Back on the Shipments page, click Mark Shipped on Jane's order.

9 Customer receives package

Jane scans the QR code on her bottle. She sees your Thank You page with your brand name, her order summary, your custom message, and a Visit Our Website button.

Order auto-marked Fulfilled

The moment Jane scans, your Shipments page updates to Fulfilled — no action needed from you.

11 Check your alerts

After several more sales, your stock drops to 4 (below threshold of 5). An alert appears on the Dashboard and Alerts page. Time to reorder!

16. Troubleshooting & Tips

Solutions to common issues

■ Camera won't start on my phone

1. Make sure you're using Chrome (Android) or Safari (iPhone).
2. Go to phone Settings → find your browser → Permissions → Camera → Allow.
3. Reload the app page and try again.
4. Make sure no other app is currently using the camera.

■ QR code won't scan

1. Ensure good lighting — avoid shadows on the label.
2. Hold phone 4–8 inches from the label.
3. Make sure the QR code is not crumpled or smudged.
4. Use Manual SKU Lookup as a fallback — type the SKU from the label.

■ My data disappeared

Data is stored in browser local storage. It can be lost if you:

- Clear browser history/data
- Use a different browser or device
- Use private/incognito mode

Always export CSV regularly as a backup.

■ Customer scanned QR but Thank You page shows 'Order Not Found'

This means the QR code was generated before a shipment was created for that product. The customer-facing URL is only encoded in the QR code after you create a shipment. Re-print the label after creating the shipment.

■ Settings aren't saving

Make sure you click the Save Settings button (the gold button in the sticky bar at the bottom of the Settings page). The button turns green when saved.

■ Stock went negative

Use a Stock Adjustment to set the quantity to the correct number. Go to Products → Stock → Adjustment → enter the correct quantity → Confirm.

■ Receipt PDF is blurry

Retake the photo with better lighting. Lay the receipt completely flat, use bright overhead light, and hold the phone directly above (not at an angle).

Quick Reference Card

Add a product	Products → + Add Product
Print a QR label	Products → QR icon on product card
Scan a QR label	QR Scanner → Start Camera Scanner
Manual SKU lookup	QR Scanner → scroll down → Manual SKU Lookup
Create a shipment	Products → Ship button on product card
Scan a receipt	Shipments → Scan Receipt on shipment row
Adjust stock	Products → Stock button on product card
View all transactions	Transactions in sidebar
View/dismiss alerts	Alerts in sidebar
Export product CSV	Dashboard or Products → Export CSV
Export transactions CSV	Transactions → Export CSV
Save brand settings	Settings → fill fields → Save Settings

Every bottle. Every batch. Always in hand.

Wellness Inventory Manager · June 2026
