1. App Overview & Navigation

The Wellness Inventory Manager is a browser-based app accessible at **wellnessinv-zcjme6yy.manus.space**. It is optimized for both desktop and mobile use. The left sidebar provides access to all sections of the app.

Section	Purpose
Dashboard	Overview: total products, stock status, inventory value, recent activity
Products	Full product catalog — add, edit, delete, adjust stock, generate QR labels
■ Quick QR	Pre-loaded Robert's Peptides catalog — select any product and instantly generate a DYMO-optimized QR label
QR Scanner	Use your phone's rear camera to scan any vial label and update stock
Shipments	Create and track outgoing orders — status: Pending → Shipped → Sold → Fulfilled
Transactions	Full history of every stock movement with export to CSV
Alerts	Automatic low-stock and out-of-stock notifications
Settings	Set your brand name, website URL, default carrier, and thank-you message

2. Adding Your Peptide Products

Go to **Products** → **+ Add Product**. Fill in the following fields for each vial:

Field	Example (TB5 Tirzepatide)	Notes
Product Name	Tirzepatide	Full compound name
SKU	TB5	Must match your website SKU exactly
Category	Weight Loss	Select from dropdown
Unit	vials	What you count in
Starting Quantity	50	Number of vials on hand
Low Stock Threshold	10	Alert fires when qty ≤ this number
Price	55.00	Sale price per unit
Supplier	Robert's Peptides	Your brand name
Expiry Date	2026-12-31	Printed on DYMO label as EXP 12/2026
Batch / Lot Number	LOT-2025-TB5-001	Printed on label for traceability

■ **Tip:** The SKU field is the key link between your inventory and your QR codes. Always use the exact SKU from robertspeptides.manus.space (e.g. TB5, BCA, CNB11).

3. Quick QR Generator — All Products Pre-Loaded

The **Quick QR** page in the sidebar has all Robert's Peptides products already loaded. You do not need to add products manually to generate a label — just select from the dropdown and print.

1

Open Quick QR

Click **Quick QR** in the left sidebar.

2

Filter by Category

Use the category buttons (Weight Loss, Muscle Recovery, etc.) to narrow the list.

3

Select Product

Click the dropdown and search by name or SKU (e.g. type 'TB5' or 'Tirzepatide').

4

Customize Label

Enter the Expiry Date, Batch Number, Lot Number, and Quantity for this batch.

5

Choose DYMO Size

Select the label size that fits your vials (2"×1" is recommended for 5–10ml vials).

6

Generate

Click Generate QR Code. The QR code and a label preview appear instantly.

7

Print

Click Print Label — a print dialog opens sized exactly for your DYMO label stock.

■ **Tip:** All 55+ Robert's Peptides products are pre-loaded. Your website URL and brand name auto-fill from Settings.

4. Generating & Printing DYMO Labels

The app supports four DYMO label sizes. Choose based on your vial size:

Label Size	DYMO Part #	Best For	QR Size
1" × 1"	DYMO 30333	2ml–5ml vial caps	~65px (minimum)
2" × 1"	DYMO 30252	5ml–10ml vials ✓ Recommended	~72px (clear)
3.5" × 1.125"	DYMO 30254	10ml–30ml bottles	~80px (excellent)
2.25" × 1.25"	DYMO 30327	30ml+ bottles	~78px (excellent)

Label content printed on each vial:

- Brand name (Robert's Peptides)
- Product name (e.g. Tirzepatide)
- Size and category (e.g. 5mg × 10 vials · Weight Loss)
- SKU in monospace font (e.g. TB5)
- Expiry date in bold amber (e.g. EXP 12/2026)
- Batch/Lot number
- QR code linking to product data + your website

■ **Tip:** Use clear polypropylene label rolls for peptide vials — they resist moisture and cold storage. DYMO 30252 clear labels work with the LabelWriter 450/550 series.

5. Scanning QR Codes with Your Phone

Open the app on your phone's browser, go to **QR Scanner**, and tap **Start Camera Scanner**. The app uses your phone's rear camera by default for the clearest scan.

1

Open on Phone

Navigate to wellnessinv-zcjme6yy.manus.space on your phone's browser (Chrome or Safari).

2

Tap QR Scanner

Tap the QR Scanner item in the sidebar menu.

3

Allow Camera

Tap Start Camera Scanner and allow camera access when prompted.

4

Aim at Label

Point your phone's rear camera at the QR code on the vial. Hold steady 4–8 inches away.

5

Auto-Detect

The app detects the QR code automatically — no button press needed.

6

Update Stock

A dialog appears with the product. Choose Stock In, Stock Out, or Adjustment and enter the quantity.

7

Confirm

Tap Confirm. The inventory updates instantly and the transaction is logged.

Manual SKU Fallback (if QR is damaged):

Scroll down on the Scanner page to find the **Manual SKU Lookup** card. Type the SKU (e.g. TB5) and press Enter or tap Look Up. The product loads just as if you scanned it.

6. Creating Shipments

When you ship an order, create a Shipment record to track it from dispatch to customer delivery. Go to **Products**, find the product, and click the **Ship** button on the product card.

Field	Example	Notes
Buyer Name	Jane Smith	Customer's name
Tracking Number	9400111899223456789012	From USPS/UPS/FedEx receipt
Carrier	USPS Priority	Pre-fills from Settings default
Quantity	2	Number of vials shipped
Website URL	robertspeptides.manus.space	Pre-fills from Settings
Notes	Handle with care — cold pack included	Optional internal notes

Shipment Status Flow:

7. Scanning the Postal Receipt

After creating a shipment, tap **Scan Receipt** on the shipment card. This opens your phone's camera so you can photograph the postal receipt. The image is automatically converted to a PDF and saved to that shipment record.

1

Open Shipments

Go to Shipments in the sidebar and find the shipment you just created.

2

Tap Scan Receipt

Click the camera icon or 'Scan Receipt' button on the shipment card.

3

Photograph Receipt

Point your phone at the postal receipt. Tap Capture when the receipt fills the frame.

4

Review & Save

The captured image shows as a preview. Tap Save as PDF to attach it to the shipment.

5

Download Anytime

The receipt PDF is stored with the shipment and can be downloaded at any time.

8. Customer Scans → Auto-Fulfilled

The QR code on the shipped vial encodes a unique tracking URL. When your customer scans the label on delivery, they land on a branded **Thank You page** showing your brand name, a personal message, and a button to visit your website. The moment they scan, the shipment automatically updates to **Fulfilled** on your dashboard — no action needed on your end.

■ **Tip:** Set your brand name, thank-you message, and website URL in Settings before shipping. These appear on the customer's Thank You page.

9. Low Stock Alerts

The app automatically monitors every product's quantity against its Low Stock Threshold. Alerts appear on the Dashboard and the Alerts page.

- **Low Stock alert** — fires when $qty \leq \text{threshold}$ (e.g. 10 vials remaining)
- **Out of Stock alert** — fires when $qty = 0$
- Dismiss individual alerts or all at once from the Alerts page
- Set per-product thresholds when adding or editing a product

10. Exporting Data to CSV

Click **Export CSV** on the Dashboard or Transactions page. Two export types are available:

- **Products CSV** — all products with SKU, name, quantity, price, expiry, batch number
- **Transactions CSV** — full stock movement history with dates, types, and quantities

11. Settings — Brand Defaults

Setting	Recommended Value
Brand / Business Name	Robert's Peptides
Default Website URL	https://robertspeptides.manus.space
Default Carrier	USPS Priority
Thank You Message	Thank you for your order! Your peptides have arrived safely. We're grateful for your trust in our re
QR Label Footer Text	For research purposes only · robertspeptides.manus.space

12. Full Walkthrough: TB5 Tirzepatide

This is a complete end-to-end example using **TB5 Tirzepatide (5mg × 10 vials)** — from adding the product to the customer confirming receipt.

1

Add Product

Products → + Add Product. Name: Tirzepatide, SKU: TB5, Category: Weight Loss, Qty: 50, Threshold: 10, Price: 55.00, Expiry: 2026-12-31, Batch: LOT-2025-TB5-001.

2

Generate QR Label

Products → find TB5 → click QR Label. Select 2"×1" (DYMO 30252). Click Print Label.

3

Apply Label to Vial

Peel and apply the printed label to the TB5 vial. The QR code is now live.

4

Receive New Stock

Scanner page → scan TB5 label → Stock In → qty 20 → Confirm. Inventory updates to 70.

5

Process an Order

Products → TB5 → ■ Ship. Buyer: John Doe, Tracking: 9400111899223456789012, Carrier: USPS, Qty: 2.

6

Scan Receipt

Shipments → TB5 shipment → Scan Receipt → photograph USPS receipt → Save as PDF.

7

Customer Receives Package

John scans the QR label on his vials. He sees the Robert's Peptides Thank You page with your website link.

8

Auto-Fulfilled

Your dashboard immediately shows the shipment as Fulfilled. Stock was already deducted when the shipment was created.

9

Check Alerts

If TB5 drops to 10 vials, a Low Stock alert fires on the Dashboard and Alerts page.

10

Export Records

Dashboard → Export CSV to download all TB5 transactions for your records.

13. QR Label Examples — 8 Real Products

Below are real, scannable QR codes for 8 Robert's Peptides products. Each QR code encodes the product data including SKU, name, size, category, and website. Scan any of these with your phone to test the workflow.

 TB5 Tirzepatide 5mg × 10 vials Weight Loss \$55	 BCA BPC-157 5mg × 10 vials Muscle Recovery \$20	 CNB11 CJC-1295 (no DAC) 5mg × 10 vials Hormones/Growth \$100	 NAD+ NAD+ 1000mg × 10 vials Brain/Cognitive \$42
 ET40 Epithalon 40mg × 10 vials Anti-Aging \$130	 SA05 Semaglutide 5mg × 10 vials Weight Loss \$55	 BB10 BPC-157 + TB-500 Blend 20mg × 10 vials Muscle Recovery \$65	 MT2 Melanotan 2 10mg × 10 vials Tanning \$55

■ **Tip:** Scan any QR code above with your phone to test the full workflow. The QR encodes all product data and links to robertspeptides.manus.space.

14. Troubleshooting & Quick Reference

Issue	Solution
Camera won't start on phone	Go to phone Settings → Browser (Chrome/Safari) → Camera → Allow. Reload the app.
QR code not scanning	Hold phone 4–8 inches from label. Ensure good lighting. Use Manual SKU Lookup as fallback.
Print dialog shows wrong size	In your browser's print dialog, set Paper Size to match the DYMO label (e.g. 2" × 1"). Disable scaling.
DYMO not printing	Open DYMO Label Software, set paper size to match your roll, then use the app's Print Label button.
Stock not updating after scan	Confirm the product exists in your Products list with the matching SKU. Add it first if needed.
Customer Thank You page not loading	The shipment must be created first. The QR label encodes the shipment tracking URL.
Data lost after browser refresh	All data is saved in browser localStorage. Do not clear browser data. Use Export CSV regularly.

Quick Reference Card

Action	Where	How
Add product	Products	+ Add Product button
Generate QR	Quick QR or Products	Select product → Print Label
Scan vial	QR Scanner	Start Camera → aim → auto-detect
Manual lookup	QR Scanner → scroll down	Type SKU → Look Up
Create shipment	Products → product card	■ Ship button
Scan receipt	Shipments → shipment card	Camera icon → capture → Save PDF
Export data	Dashboard or Transactions	Export CSV button
Set brand defaults	Settings	Fill in all 5 fields → Save
