

Brandon's AI Recording Vault — Workflow Summary

What Is This?

Brandon has set up an automated system that takes audio recordings from his portable voice recorder, transcribes them using AI, creates summaries, and organizes everything neatly into folders on his iCloud Drive.

The Equipment

Voice Recorder: Disoidoe 136GB Magnetic Voice Recorder

- A small, magnetic device that records audio (meetings, calls, conversations, notes)
- Plugs into the Mac via USB to transfer files

AI Assistant: Manus AI

- Automatically listens to the recordings
 - Transcribes everything that was said (who said what)
 - Writes a summary of the conversation
 - Names the file based on the topic and date
 - Sorts it into the correct folder
-

How It Works

1. **Brandon records something** — a meeting, a phone call, a personal note, or Marc screaming
2. **He plugs the recorder into his Mac** — audio files transfer to iCloud
3. **Manus AI automatically processes the files:**
 - Transcribes the full dialogue
 - Creates a summary
 - Names it (e.g., "Team Budget Meeting - June 24, 2026")
 - Moves it to the right folder

4. **Everything is organized in iCloud** — accessible from any Apple device

The Folder Structure

All files live in **iCloud Drive > Recordings Vault**:

Folder	What Goes In It
Inbox	Raw audio files waiting to be processed
Meetings	Work meetings and group discussions
Calls	Phone call recordings
Personal Notes	Voice memos and personal dictation
Marc's Inappropriate Screaming	Self-explanatory
Other	Anything that doesn't fit the above

What Each Processed Recording Looks Like

For every recording, Brandon gets:

- **The original audio file** (e.g., "Budget Discussion - 2026-06-24.m4a")
- **A summary document** with the full transcript and a short summary (e.g., "Budget Discussion - 2026-06-24 - Summary.md")

The Marc Feature

The system has been trained to recognize Marc's voice. When Marc is heard yelling in a recording, that file automatically gets sorted into the **"Marc's Inappropriate Screaming"** folder.

Marc's Voice Profile:

- Extremely loud, abrupt escalation from normal to full yell
- Sharp, demanding tone
- Repeats names rapidly ("Ethan! Ethan!")
- Immediately follows with direct commands

Why This Is Useful

- Never lose track of what was said in a meeting
- Searchable transcripts of every conversation
- No manual note-taking required
- Everything organized automatically
- And yes, a permanent record of Marc's outbursts

Set up: June 2026 Powered by Manus AI
