

How our teams can use the ClickUp portal

Practical examples for property operations, regional leadership, maintenance, leasing, inspections, Help, people operations, and integration governance.

USE Coordinate outcomes across green-tab systems.	OWN Give every commitment one accountable owner.	VERIFY Close work with evidence and source links.
PREPARED BY MANUS AI · JULY 14, 2026 · TEST3 · ALL RECORDS ARE ILLUSTRATIVE		

FIELD GUIDE

The portal in one page

The portal is the team's **system of action**. It does not replace the specialist systems behind the green navigation tabs. It gives the organization one place to see exceptions, assign accountable work, coordinate cross-functional dependencies, record decisions, and verify closure.

Figure 1: The Operations command center brings exceptions, owners, due times, source labels, and portfolio risk into one controlled view.

SOURCE SYSTEM	PORTAL RECORD	OWNED OUTCOME
Vacancy	Vacancy Case	Ready-to-show, prelease, or move-in milestone
AppWork	Work Order Exception / Turn Workstream	Blocked work resolved and verified
Inspections	Inspection Finding	Evidence accepted and reinspection complete
Help / Hub	Help Request / Knowledge Candidate	Question resolved and repeat issue documented
OneSite / RealPage	Resident or financial exception	Authorized exception decision
Paychex	Restricted lifecycle/access task	Access, training, or equipment complete

ONE WORKING RULE

When a message contains an action and a deadline, create or link a task. When a discussion produces a decision, record the decision and approver in the task.

What belongs in a portal task

Include	A clear outcome, one accountable owner, due date, property/unit identifiers, approved source link, status, blocker, next action, and evidence reference.
Keep in source system	Passwords, API keys, payroll details, Social Security numbers, banking information, full resident ledgers, screening decisions, legal notes, and unredacted sensitive documents.

FIELD GUIDE

A practical daily operating rhythm

The portal should reduce chasing, not add another inbox. Each role starts from a focused view, acts only on owned or relevant exceptions, and converts conversation into durable work.

MOMENT	TEAM ACTION	PORTAL BEHAVIOR
Start of day	Open role-specific attention view	Review P1, overdue, due-today, and blocked items before reading general chat.
Daily huddle	Confirm risks, owners, and next update	Open the task from the meeting; do not recreate the status in a separate note.
During work	Update only material changes	Record source link, blocker, decision request, or evidence. Avoid “still working” noise.
Handoff	Name the next accountable owner	Reassign only when responsibility genuinely changes; explain the handoff in a comment.
End of day	Clear unresolved same-day commitments	Escalate at-risk work and state the next update time.

STANDARD TASK ANATOMY

TITLE VAC · Pine Ridge · Unit 204 · Preleased move-in at risk OWNER Property Manager DUE Today · 11:30 AM ET
 SEVERITY P1 / Move-in risk SOURCE Vacancy record + AppWork turn link IMPACT Resident move-in scheduled tomorrow;
 readiness at 62% NEXT Maintenance Supervisor confirms recovery plan by 10:00 AM EVIDENCE Final inspection link and
 approved ready timestamp

TASK VS. CHECKLIST ITEM

Use a checklist item when the step is small, stays inside one owned outcome, and needs no separate discussion. Use a task or subtask when it has a different owner, due date, dependency, or evidence trail. ClickUp supports assigning individual checklist items and converting them into tasks or subtasks.[1]

FIELD GUIDE

Property and regional management

ILLUSTRATIVE USE CASE

Preleased move-in at risk

WHEN TO USE IT

A preleased unit is not on track for the promised ready or move-in date.

ACCOUNTABLE OWNER

Property Manager

PORTAL FLOW

Vacancy status or a team member creates/updates a Vacancy Case → maintenance and leasing workstreams link to it → owner records the recovery decision → final readiness evidence is linked → property manager closes the case.

WHAT GOOD LOOKS LIKE

The team can answer: What is at risk? Who owns recovery? What decision is needed? When is the next update? What evidence proves the unit is ready?

SOURCE-SYSTEM BOUNDARY

Detailed work-order labor and materials stay in AppWork. Applicant/resident records and regulated decisions stay in the authorized property-management system.

ILLUSTRATIVE USE CASE

Weekly regional exception review

WHEN TO USE IT

A regional manager needs to resolve cross-property aging, workload, or repeat-risk patterns.

ACCOUNTABLE OWNER

Regional Manager

PORTAL FLOW

Open the regional dashboard → filter to critical, overdue, and blocked → review the oldest/highest-impact tasks → record each decision in the task → create one regional action only when the issue spans multiple properties.

WHAT GOOD LOOKS LIKE

The meeting produces named owners and dates, not a second status document. Repeated exceptions become root-cause or training actions.

SOURCE-SYSTEM BOUNDARY

Portfolio metrics may summarize source data, but source financial, resident, payroll, and work-order detail remains in its governed system.

REGIONAL REVIEW COMMENT

[DECISION] Approve one-day vendor recovery plan up to the authorized threshold. OWNER: Maintenance Supervisor DUE: Today · 3:00 PM ET NEXT UPDATE: Vendor arrival confirmed by noon. SOURCE: AppWork W0-8821 APPROVER: Regional Manager

Useful management views

Property Attention	Open P1, overdue, due-today, move-in risk, inspection findings, and unresolved Help Requests for one property.
Regional Attention	Same control set rolled across a region, with ownership and aging.
Executive Decisions	Only issues requiring policy, funding, risk acceptance, or cross-region priority.
Commitment Calendar	Date-driven work that will materially affect residents, compliance, payroll, or operations.

FIELD GUIDE

Maintenance and turns

ILLUSTRATIVE USE CASE

Emergency water intrusion

WHEN TO USE IT

An active leak, life-safety concern, major outage, or similar event needs immediate acknowledgement and cross-functional coordination.

ACCOUNTABLE OWNER

Maintenance Supervisor

PORTAL FLOW

Phone/urgent channel initiates response → portal P1 task links the AppWork work order → owner records impact, containment, vendor/parts status, and next update → regional manager joins if threshold is met → closure requires source completion plus evidence.

WHAT GOOD LOOKS LIKE

Urgent contact happens immediately, while the task maintains one timestamped operational record. The incident does not disappear inside chat.

SOURCE-SYSTEM BOUNDARY

AppWork remains the work-order authority. Resident-sensitive details and insurance/legal material stay in authorized systems.

ILLUSTRATIVE USE CASE

Turn blocked by parts or vendor

WHEN TO USE IT

A make-ready milestone cannot proceed and may affect market-ready or move-in dates.

ACCOUNTABLE OWNER

Maintenance Supervisor

PORTAL FLOW

Turn Workstream receives/records blocker → assign the recovery step → record ETA and decision threshold → update Vacancy Case if market/move-in date is affected → accept final evidence at the readiness gate.

WHAT GOOD LOOKS LIKE

The portal distinguishes the source work order from the cross-functional blocker, so leasing and property teams see the impact without duplicating every technician update.

SOURCE-SYSTEM BOUNDARY

Technician labor, parts, cost details, and work completion remain in AppWork. The portal holds only the exception, impact, owner, decision, and source link.

P1 OPERATIONAL MESSAGE

[P1] Willow Creek B-17 – Active water intrusion IMPACT: Two units affected; containment underway. OWNER: Maintenance Supervisor NEXT UPDATE: 10:30 AM ET DECISION NEEDED: Authorize emergency vendor if internal response misses ETA. SOURCE: AppWork W0-8821 PORTAL: Linked P1 exception task

FIELD GUIDE

Leasing and vacancy

ILLUSTRATIVE USE CASE

Vacancy Case from notice through ready-to-show

WHEN TO USE IT

A unit becomes notice, vacant, make-ready, ready-to-show, preleased, or move-in pending.

ACCOUNTABLE OWNER

Property Manager

PORTAL FLOW

Create one Vacancy Case per unit cycle → relate turn, pricing/marketing, and prospect/move-in workstreams → use milestone fields rather than chat-only updates → close after authorized readiness and occupancy milestones.

WHAT GOOD LOOKS LIKE

The case shows the current stage, target dates, blocker, responsible team, next decision, and source links without forcing users to reconcile several unrelated tasks.

SOURCE-SYSTEM BOUNDARY

Applicant screening, resident documents, lease, ledger, concessions, and personal data stay in the authorized leasing/property system.

ILLUSTRATIVE USE CASE

Stale qualified prospect follow-up

WHEN TO USE IT

A qualified lead has no recorded next action inside the approved follow-up interval.

ACCOUNTABLE OWNER

Leasing Agent

PORTAL FLOW

Prospect milestone creates/updates a follow-up task → agent records outcome code and next date → task closes on appointment, application, disqualification under policy, or documented no-response sequence.

WHAT GOOD LOOKS LIKE

Managers can see follow-up aging and coaching demand without exposing unnecessary applicant details in the portal.

SOURCE-SYSTEM BOUNDARY

Screening outcomes, protected-class information, identity documents, and application records never belong in the portal task.

STRUCTURED INTAKE

A ClickUp Form can turn a standardized submission into a task in a selected location, and settings can apply a task template or automatic assignee.[2] Use this for approved Help, training, inspection-exception, or new-property intake — never for passwords or unrestricted sensitive uploads.

FIELD GUIDE

Inspections and compliance

ILLUSTRATIVE USE CASE

Life-safety finding requires evidence review

WHEN TO USE IT

An inspection identifies a critical deficiency requiring remediation, evidence, and possibly reinspection.

ACCOUNTABLE OWNER

Compliance Reviewer

PORTAL FLOW

Inspection source creates/updates a Finding task → assign remediation owner and due date by severity → maintenance links source work → evidence is submitted through an authorized link → reviewer accepts or rejects evidence → schedule reinspection if required.

WHAT GOOD LOOKS LIKE

The finding remains open until the authorized reviewer verifies closure. “Work completed” is not the same as “finding closed.”

SOURCE-SYSTEM BOUNDARY

The inspection platform remains authoritative for the original finding, inspection report, signatures, and official closure record.

FINDING RECORD

TITLE INS · Lakeview · Unit 311 · Egress obstruction SEVERITY Critical OWNER Compliance Reviewer REMEDIATOR Maintenance Supervisor DUE Today · 1:00 PM ET SOURCE Inspection INS-451 + linked AppWork order EVIDENCE Authorized image/report link CLOSE WHEN Reviewer accepts evidence and required reinspection passes

What the inspector should see

Open finding	Severity, due date, property/unit, remediation owner, source link, evidence status, reinspection need.
Rejected evidence	Reviewer reason, correction needed, new due date, accountable owner.
Closed finding	Accepted evidence reference, reviewer, closure timestamp, official source record.

FIELD GUIDE

Help and training

ILLUSTRATIVE USE CASE

Help Request becomes a knowledge candidate

WHEN TO USE IT

A team member cannot complete a process, access a system, or interpret a procedure.

ACCOUNTABLE OWNER

Functional Owner

PORTAL FLOW

User submits structured Help Form → submission creates a Help Request task → coordinator categorizes impact and routes to owner → owner resolves and records source/SOP link → repeat issue is related to a Knowledge Candidate or training action.

WHAT GOOD LOOKS LIKE

The request is resolved for the user and produces a reusable improvement when the same confusion appears repeatedly.

SOURCE-SYSTEM BOUNDARY

The request must not contain passwords, authentication codes, full resident records, payroll details, or sensitive screenshots.

ILLUSTRATIVE USE CASE

Training request after a repeated workflow error

WHEN TO USE IT

Multiple properties show the same process mistake or onboarding gap.

ACCOUNTABLE OWNER

Training Coordinator

PORTAL FLOW

Link related Help Requests/findings → define the learning outcome → assign process owner for accuracy review → schedule target audience → publish approved reference → record attendance/acknowledgment under policy.

WHAT GOOD LOOKS LIKE

Training responds to evidence, has an owner and audience, and links back to the operational problem it is designed to reduce.

SOURCE-SYSTEM BOUNDARY

Employment records and protected HR information remain in approved HR systems. The portal stores only the workflow/training evidence permitted by policy.

HELP FORM FIELDS

REQUEST TYPE • FUNCTION • PROPERTY/REGION • BUSINESS IMPACT WHAT WERE YOU TRYING TO DO? • WHAT HAPPENED?
AUTHORIZED SOURCE LINK • SAFE SCREENSHOT (OPTIONAL) DEADLINE OR EVENT AT RISK • BEST CONTACT METHOD

FIELD GUIDE

People operations

ILLUSTRATIVE USE CASE

New property manager readiness

WHEN TO USE IT

A new or transferred manager needs coordinated access, training, equipment, and property assignment.

ACCOUNTABLE OWNER

Hiring/Receiving Manager

PORTAL FLOW

Restricted onboarding parent task → checklist/subtasks for approved access, property assignment, required training, equipment, and first-week reviews → each system owner confirms completion → manager accepts readiness.

WHAT GOOD LOOKS LIKE

Every readiness control has an owner and due date; the task contains safe status only, not payroll or employment documents.

SOURCE-SYSTEM BOUNDARY

Pay, tax forms, banking, SSN, background checks, benefits, medical information, and performance/disciplinary content stay in Paychex or the approved HR record.

ILLUSTRATIVE USE CASE

Offboarding access control

WHEN TO USE IT

An employee or vendor relationship ends or access must be reduced.

ACCOUNTABLE OWNER

HR/IT Access Owner

PORTAL FLOW

Restricted event triggers time-bound access checklist → system owners revoke/transfer approved access → service identities and shared ownership are reviewed → completion evidence is recorded → HR/IT approves closure.

WHAT GOOD LOOKS LIKE

Access is removed on time, operational ownership is transferred, and completion is auditable without exposing the reason for separation broadly.

SOURCE-SYSTEM BOUNDARY

Termination reason, legal correspondence, payroll, and personnel records remain restricted to authorized HR/legal systems.

PERMISSION RULE

People Operations tasks and Docs should be private and role-scoped. A manager should see only the onboarding, access, training, or equipment work needed to act — not underlying HR or payroll data.

FIELD GUIDE

Integration and data operations

ILLUSTRATIVE USE CASE

Failed synchronization creates an Integration Error

WHEN TO USE IT

A source event cannot be authenticated, validated, mapped, delivered, or reconciled.

ACCOUNTABLE OWNER

Integration Engineer

PORTAL FLOW

Monitoring creates/updates one Integration Error by connector and incident → classify error → record affected count and correlation ID → pause/retry according to runbook → data/system owner validates impact → reconcile before closure.

WHAT GOOD LOOKS LIKE

The portal shows business impact and recovery ownership. Technical logs contain safe diagnostic detail, while secrets and sensitive payloads remain outside the task.

SOURCE-SYSTEM BOUNDARY

API keys, OAuth tokens, webhook secrets, full payloads, and unrestricted logs are never pasted into ClickUp. Use a vault reference and approved observability system.

ILLUSTRATIVE USE CASE

Property or unit mapping exception

WHEN TO USE IT

An incoming record has no approved property/unit match or conflicts with the canonical identity.

ACCOUNTABLE OWNER

Data Steward

PORTAL FLOW

Quarantine the event → create Master Data Exception → compare authoritative IDs → propose mapping change with before/after impact → business and technical owners approve → replay safely → reconcile affected records.

WHAT GOOD LOOKS LIKE

No operational task is created against a guessed property or unit. The mapping decision is explicit, reviewable, and reusable.

SOURCE-SYSTEM BOUNDARY

The portal tracks the exception and decision. Canonical source records are changed only in the authorized system by an approved role.

INTEGRATION ERROR RECORD

CONNECTOR Vacancy → ClickUp ENVIRONMENT Production ERROR CLASS Missing unit mapping CORRELATION cor_20260714_09422 AFFECTED 7 events quarantined OWNER Integration Engineer DATA OWNER Property Master Data Steward NEXT Mapping decision by 2:00 PM ET SECRET REF Vault reference only – never secret content

FIELD GUIDE

Communications and meetings

Use Chat, Teams, email, or phone for contact; use the task for accountability. The message should help the receiver understand impact, ownership, deadline, decision, and where the durable record lives.

MESSAGE-TO-TASK STANDARD

[SEVERITY] [PROPERTY / REGION] – [OUTCOME OR PROBLEM] IMPACT: Business consequence OWNER: One accountable person DUE / NEXT UPDATE: Date and time with timezone BLOCKER / DECISION: Specific request SOURCE: Authorized source-system link PORTAL: Task link

CHANNEL	GOOD USE	RECORD ACTION
Task comment	Update, blocker, question, approval, concise decision	Keep the outcome in the parent task.
ClickUp Chat	Triage, handoff, short announcement, task link	Convert action + deadline into a task.
Microsoft Teams	Meeting coordination and approved alert	Link back to the portal task; do not create a competing task system.
Email	Vendor/external communication and approved digest	Reference the task/source record when appropriate.
Phone / urgent path	Life-safety, outage, immediate P1 response	Summarize call outcome and next update in the incident task.

Meeting examples

MEETING	OPEN	CLOSE WITH
Daily property huddle	Property Attention, vacancy/turn risk, critical findings	Today's owners, decision requests, next update times.
Weekly regional review	Critical/overdue/blocked and repeat patterns	Decisions in tasks; regional root-cause actions only.
Monthly portfolio review	Scorecard, aging, adoption, integration health	Approved priorities, thresholds, policy or funding decisions.
Incident bridge	One incident parent and current workstreams	Timestamped status, recovery owner, next update, closure/review.

FIELD GUIDE

Rollout Control — 30-Day Schedule

The interactive register gives the implementation team a shared sequence of owned milestones. Completion, notes, and evidence references are saved automatically in the browser used for the current prototype. Teams can filter by status or owner and search milestone text.

Figure 2: The 30-Day Schedule shows remaining milestones, the next accountable step, owners, progress, and an evidence or blocker note for each item.

ILLUSTRATIVE USE CASE

Completing Day 06 — canonical property mapping

WHEN TO USE IT

The data steward has produced and reconciled the approved property/region identity map.

ACCOUNTABLE OWNER

Data Steward

PORTAL FLOW

Open Rollout Control → select 30-Day Schedule → locate Day 06 → add the approved mapping-document link and reconciliation result → check complete → review the next open milestone.

WHAT GOOD LOOKS LIKE

The note identifies the evidence, approval owner, discrepancies resolved, and any accepted exception. A checkmark without evidence is not enough for a launch-critical control.

SOURCE-SYSTEM BOUNDARY

Do not paste private employee lists, credentials, or unrestricted source exports into the note. Link to the authorized document location.

PROTOTYPE PERSISTENCE

The current portal saves checklist progress locally in the browser. That is suitable for demonstrating the workflow. For shared production progress across users and devices, connect the register to authenticated user accounts and a governed backend record.

FIELD GUIDE

Rollout Control — Launch Readiness

Launch Readiness is a separate decision register. It should not be treated as a second copy of the 30-day schedule. A schedule item confirms work occurred; a launch control confirms the organization can proceed safely.

Figure 3: The launch register separates schedule progress from twelve owned controls that determine whether the pilot can proceed.

ILLUSTRATIVE USE CASE

Verifying the production release matches staging

WHEN TO USE IT

The release candidate is configured and the team is preparing for the go/no-go decision.

ACCOUNTABLE OWNER

ClickUp Administrator

PORTAL FLOW

Open Launch Readiness → select the release control → compare production and approved staging configuration → add comparison evidence and release version → check complete only after authorized review.

WHAT GOOD LOOKS LIKE

The evidence states what was compared, by whom, when, and the result. Any difference creates an owned issue rather than being hidden in a note.

SOURCE-SYSTEM BOUNDARY

Do not include tokens, secret values, private logs, or sensitive source payloads in the evidence note or screenshot.

Example go/no-go conversation

LAUNCH DECISION

STATUS CONDITIONAL GO OPEN CONTROL Notification recipient allowlist OWNER Operations + Integration EVIDENCE
Controlled test with Test3 marker to designated recipient DEADLINE 3:00 PM ET STOP RULE Any unapproved recipient
or missing audit record APPROVER Executive Sponsor after control owner confirmation

FIELD GUIDE

First-week quick start by role

Property Manager

START

Open Property Attention and Vacancy Cases.

INSPECT

Move-in risk, P1, overdue findings, blocked turns.

CONVERT

Messages with action + deadline into owned tasks.

Regional Manager

START

Open Regional Attention and risk concentration.

INSPECT

Oldest/highest-impact exceptions and repeat patterns.

CONVERT

Decisions into tasks; cross-property patterns into regional actions.

Maintenance Supervisor

START

Open P1, turn blockers, and aging exceptions.

INSPECT

Containment, ETA, parts/vendor blocker, evidence.

CONVERT

Source work into exception coordination only when impact crosses teams.

Leasing Team

START

Open Vacancy Cases and follow-up queue.

INSPECT

Ready-to-show, stale qualified prospects, move-in risk.

CONVERT

Approved milestone updates into next actions without sensitive applicant detail.

Inspector / Compliance

START

Open critical and due-soon findings.

INSPECT

Evidence status, remediation owner, reinspection need.

CONVERT

Completed work into verified closure only after review.

Help / Training

START

Open unowned, high-impact, and repeated requests.

INSPECT

Routing quality, resolution, recurring confusion.

CONVERT

Resolved requests into knowledge or training candidates.

People Operations

START

Open restricted access/onboarding controls.

INSPECT

Due access, training, equipment, and ownership transfer.

CONVERT

Lifecycle event into minimum-necessary workflow tasks.

Integration / Data

START

Open connector health, dead letters, and mapping exceptions.

INSPECT

Affected records, auth failures, retries, reconciliation.

CONVERT

Technical failures into owned business-impact records without secrets.

Three habits to adopt immediately

NO.	HABIT	STANDARD
01	Own the outcome	One accountable owner and one due date for every commitment.
02	Link the truth	Use approved source-system links instead of duplicating regulated or detailed source records.
03	Close with evidence	A status change is not enough; show the authorized evidence, reviewer, or source completion.

STOP AND ASK

If you are unsure whether information is sensitive, do not paste it into the portal. Ask the data/system owner, use the minimum necessary detail, and link to the authorized source instead.

FIELD GUIDE

Reference cards

Task title patterns

Vacancy	VAC · Property · Unit · Outcome/Risk
Maintenance exception	MNT · Property · Unit/Asset · Exception
Inspection finding	INS · Property · Unit/Area · Finding
Help	HELP · Function · Property/Region · Need
Integration	INT · Connector · Environment · Failure/Change
Access	ACCESS · User/Role · System · Request/Event

Status language

Open	Accepted into the workflow but not actively underway.
In progress	Owner is actively working and the next action is known.
Blocked	Progress requires a named decision, dependency, part, vendor, access, or source correction.
Awaiting evidence/review	Work may be complete, but authorized verification is pending.
Closed	Outcome is verified under the applicable source-system and approval rule.

Escalation language

Standard	Assigned SLA and normal notification.
At risk	SLA near, material blocker, or property/region impact; same-business-day response.
P1 / Critical	Life safety, outage, imminent move-in failure, or compliance deadline; immediate urgent contact plus task.
Executive incident	Multi-property, security, payroll, or material compliance impact; incident bridge and parent task.

DOCUMENT CONTROL

This guide contains illustrative operational examples for the PropertyMax portal. It does not authorize production access, change source-system ownership, replace legal/HR/compliance policies, or approve an integration. Confirm plan availability, permissions, retention, and data boundaries before production use.
