

La Campanella — Piano Mastery Portal

Complete User Guide

Version: August 2026

URL: piano-composition-mastery.manus.space

Overview

La Campanella is your personal AI-powered piano mastery portal. It manages your sheet music library, analyzes compositions, maps Hanon exercises, generates 30-day practice frameworks, and helps you find new sheet music from any source — Spotify, YouTube, or a simple composition name.

1. Uploading Sheet Music

Single File Upload

Drag and drop any of the following file types directly onto the upload zone on the home page:

- **PDF** — standard sheet music files
- **PNG / JPG / WEBP** — scanned score images
- **HTML** — saved web pages from IMSLP or similar sites

The file size limit is **50MB per file**. Once dropped, the portal uploads the file to your library and immediately begins AI analysis in the background (typically 30–60 seconds).

ZIP Folder Import (Batch)

This is the fastest way to import your entire OneDrive Piano folder at once.

1. On your Mac, locate your “**Piano - New Music to Learn**” folder in OneDrive.
2. Right-click the folder → **Compress** → this creates a `.zip` file.
3. Drag the `.zip` file onto the upload zone on the home page.
4. The portal extracts every PDF inside the ZIP automatically and imports them one by one.
5. A live progress panel appears showing each filename with a status indicator:
 - **Grey dot** — waiting in queue

- **Spinning icon** — currently uploading
- **Green checkmark** — successfully imported
- **Red X** — error (file too large, duplicate, or network issue)

6. A progress bar fills as files complete. When finished, a toast notification summarises the results (e.g. “¹⁹/₂₃ imported, 4 failed”).

7. Click **Dismiss** to close the progress panel.

Note: Files larger than 50MB and macOS `__MACOSX` metadata files are automatically skipped. Duplicate filenames already in your library are also skipped.

URL Analysis

Below the upload zone is a URL input field. Paste any public webpage URL (e.g. an IMSLP page) and click **Analyze URL**. The portal fetches the page content and runs AI analysis on it, adding it to your library.

2. Find Any Piece — Sheet Music Finder

The “**Find Any Piece**” section accepts any of the following inputs:

Input Type	Example
Spotify share link	<code>https://open.spotify.com/track/...</code>
YouTube URL	<code>https://youtu.be/...</code>
Plain composition name	<code>Chopin Nocturne Op 9 No 2</code>
Composer + title	<code>Debussy Clair de Lune</code>

How it works:

1. Paste or type your input into the search box and click **Find Sheet Music**.
2. The AI identifies the composition (title, composer, arranger if applicable).
3. The portal searches your **Scribd saved library first** — if you already have it saved, it appears at the top with a gold badge.
4. Results from **IMSLP** (public domain) and **MuseScore** (free arrangements) are shown below.

5. Each result card shows the source, title, and an **Open** button to view it directly.

Tip: For Spotify links, the portal uses Spotify's oEmbed API to extract the track title without requiring your Spotify credentials.

3. My Scribd Library

Your entire cached Scribd library is displayed directly on the home page in the “**My Scribd Library**” section — no need to paste a link first.

- **Search box** — type any keyword (composer name, piece title, number) to filter your saved docs instantly. Two-character keywords like “25” are supported.
- **Open in Scribd** — each result has a gold button that opens the document directly in Scribd in a new tab.
- The section header shows the total count of your saved docs (e.g. “31 saved”).

Adding Docs to Your Scribd Cache

Go to **Auto-Import** (top-right nav) → scroll to **Scribd Library Cache**:

- **Single URL:** Paste any Scribd document URL and click **Add**. The title is extracted and saved immediately.
 - **Bulk HTML sync:** Open your Scribd saved list in your browser, copy the full page source (`Cmd+U` on Mac, then `Cmd+A` + `Cmd+C`), paste it into the text area, and click **Sync**. All document links are parsed and added at once.
-

4. Auto-Import Page

Access via the **Auto-Import** link in the top-right navigation.

Batch PDF Import

Drag individual PDF files (or multiple files at once) into the drop zone. Click **Import All** to upload them to your library. Each file shows its status (uploading, imported, skipped, error) in real time.

Import History

The bottom of the page shows a log of every previous import with timestamps, filenames, and outcomes.

5. Your Library

The “**Your Library**” section on the home page shows all your compositions with their current analysis status:

Badge	Meaning
Analyzing... (yellow)	AI analysis is running in the background
Ready (green)	Analysis complete — click to view full details
Error (red)	Analysis failed — click Retry to try again
Featured (gold)	Pinned featured composition

Click any composition card to open the full detail view.

6. Composition Detail View

Each composition has a dedicated page with four sections:

Your Score

An inline PDF viewer for your sheet music. Buttons for **Download** and **Print** are available at the top.

Part I — Historical & Compositional Context

Two to three paragraphs of background on the piece: its history, the composer’s intent, and its place in the repertoire.

Part II — Technical Evaluation

The four to six most significant technical challenges in the piece, each with:

- Specific measure locations
- Description of the challenge
- Targeted practice tips

Part III — Hanon Exercises

Eight to twelve recommended Hanon exercises (from the 60 Exercises) that directly address the technical challenges identified. Each exercise has a **Watch** button linking to a YouTube demonstration.

YouTube Performance Video

The portal automatically finds the best YouTube performance of the piece. A split-screen button lets you watch the video alongside your sheet music simultaneously.

Part IV — 30-Day Practice Framework

A complete four-week practice plan with:

- Daily session structure (warm-up, technical work, repertoire, cool-down)
 - Weekly milestones and goals
 - A progress tracker (mark days complete to track your progress)
-

7. AI Analysis — What to Expect

- Analysis typically completes in **30–90 seconds** after upload.
 - The AI uses **Claude Haiku** and automatically retries up to **3 times** if it encounters a formatting issue, so most analyses succeed without any manual intervention.
 - If a composition still shows **Error** after retrying automatically, click the **Retry** button on the card to trigger a fresh analysis.
 - Large anthology PDFs (e.g. “Complete Piano Sonatas”) may be identified as the collection rather than a single piece — for best results, upload individual pieces.
-

8. Metronome

A built-in metronome is available on every composition detail page. Look for the **metronome icon** in the toolbar at the top of the page. Tap it to open the metronome panel where you can set BPM and start/stop the beat.

9. Split-Screen Mode

On any composition detail page, click the **Split Screen** button to open a side-by-side view of your sheet music and the YouTube performance video. When split-screen is active, the main page video automatically pauses to prevent audio overlap.

10. Tips & Best Practices

- **ZIP import is the fastest workflow** — zip your entire OneDrive Piano folder and drop it once to import everything in one session.
 - **Search your Scribd library by number** — searching “25” will find “Idea 25”, “Op. 25”, etc.
 - **Use plain text in Find Any Piece** — you do not need a URL. Typing “Ravel Bolero piano” works just as well as a Spotify link.
 - **Retry errors after a few minutes** — if the AI is under load, waiting 2–3 minutes before retrying often resolves the issue.
 - **Print directly from the portal** — the Print button on the score viewer sends the PDF to your system print dialog, preserving all pages and margins.
-

11. Account & Access

- Sign in with your **Manus account** (username and password).
 - All data (library, Scribd cache, progress tracking) is stored per-user — your library is private to your account.
 - The portal is accessible at piano-composition-mastery.manus.space from any device.
-
